To our great genius Professor Einstein, to our great President, Mr. Truman, and to our great lady, Mrs. Roosevelt, may I have the great honor and pleasure to take the liberty to enclose three of my articles -- one article to our great genius Professor Einstein (whom I was fortunate to meet) one to our great President, Mr. Truman (as it takes a great president to do a great job) and one to our great lady, Mrs. Roosevelt, all of whose names appear in my articles.

Truthfully yours,

as old as the moon, why the moon - why not the sun ....

### TO LIVE OR NOT TO LIVE JM

Our great genius Professor Einstein gave us a gift as that would enable all of us to live and so would that help all of us to be gifted. The gift consists of the greatest discovery that ever was made or ever was heard the world over. That made and makes the great genius to be the most popular genius in the Universe. The great genius disclosed the secret process of his great formula and showed us a way, rather to the great geniuses and great technicians, how to split nature's atoms, and as a matter of fact they did..... As that would separate the matter from the force, and the force from the matter (commonly called) and so was that proven to be a factual fact..... In combination with this and that and what not.....that gave birth to the atomic bomb, and the atomic bomb can be used for destruction, construction and production. And that is what made and makes our great genius Professor Einstein, to be next to nature but not above nature. And so did our great President, Mr. Truman, the honest to goodness gentleman, who gave an order not to drop the atomic bomb, the voice of our great President is CONSTRUCTION, PRODUCTION, PAACE and DEMOCRACY. And that made and makes our great President to be next to nature but not above nature. Great Geniuses as a rule say what they want to say.

A great genius was going around from one place to another place, from one street to another street, day in and day out, with a lam term in his hands, the genius was looking to find the truth. Did the genius find the truth? How could the genius find the truth with an old fashioned dark lam term? He couldn't, can you?

Another great genius said: That the sun does not revolve, nor does the sun rise, nor does the sun set, and that the earth does revolve. And that runs around millions and billions of miles and that none of us can catch it. Another great genius takes a daily bath, and the genius discovered a great discovery and he ran out in the street naked, Eureka, Eureka - the genius found what he could not find before as that would help all of us to know what the most of us did not know.

Another great philosopher Confucius the Great, tell me who your friends are and I will tell you who you are -- all of us have dear friends and all of us know who we are.

Another great philosopher - Know thyself -- sure thing we know ourselves.

Another great philosopher and naturalist was locked up and put in jail, the great Emerson came to visit his friend and he knocked at the door; what are you doing inside? The same what you are doing outside. And so do we knock on the doors, not all of us but most of us.

Another wise man - I am what I am and because I am what I am, that is why I am who I am and what I am, and so are we.

Another little genius said: That he was a little genius before he was born, that's why he wants his grandpa to listen to his little story and here it is: "Grandpa dear please listen to my story. As I was walking on the Brooklyn Bridge there I have seen a big slim hippopotamus with a sweet little mouth, as sweet as sugar, and he ran around from one end to the other, suddenly he stopped and he made a big jump from the bridge right on the top of the Woolworth building and back, then and there it came to my mind that the hippo must have been on a lift." Did you see that with your own eyes? "I swear to the sun and the stars grandpa dear that I have seen that with my own eyes in my dream, and I am 10 years old and my name is Phil Barton.

Truthfully yours,

### LIFE IS EVERYBODY'S BUSINESS

Why? I will come to that ....

### TIME IS MONEY

Why? Because most of us don't know the real meaning of time or money -- that's why the most have no time, and that's why the most have no money.

### CONFUSION

Please answer my question. What question? The question I asked you before. I don't know - do you know, nor do I know -- they confuse themselves and they confuse others.---

### THE CATS TOO WANT TO LIVE

Their profession is to scratch, to catch, and to sing night songs.

### SO DO THE MONKEYS WANT TO LIVE

Their business is jazz business, to make a lot of noise, to climb and jump without breaking their heads. Why? Because there is no monkey business with the monkeys.

### COMMON SENSE - THE DYERS WANT TO LIVE TOO

Their business is to dye. For them to make a living they must dye. They fear, they don't want to dye and they dye.

### FOUNDATION

Our infants and babies are the nearest and dearest friends of ours. They love us and we love them; they admire and kiss us and we do the same; they enjoy themselves and make us enjoy ourselves; don't they from time to time call Mamma's and Daddy's attention -- Mamma dear Hha Hha - or Daddy dear Kitty Kat, as to say, beware of the cat that smiles in your

face and scratches you in the back. Don't they breathe and eat - jump and dance. Why not - our infants and babies are the greatest comedians in the world. They make us laugh and they make us cry, and that all of them are honest, they don't care to be disturbed and as a matter of fact when they want, they want - and when they don't want, they protest and they holler murder - as that is in them and within them ..... Are they not our treasure and treasury sure thing they are; if not for our infants and babies where would we be?.... They don't like drams and so do they detest scandals with all of the artificial sensations, that's why they love their mama dear and their daddy dear - the nearest and dearest friends as well and so is that, in them and within them....and that's what makes them know how to take good care of themselves.

#### REALITY

Jokes aside, what is life?

Life is everybody's business for all of us to live the living way of life, and that life consists of a big portion of nature's everlasting energy. In combination with the rest of the elements life makes us to live, and that there can be living without life nor can there be life without the living of life, and that life on and for itself does not and can not make all of the non-living to live, nor can life make all of the living not to live. - Nature can, because nature consists of everlasting energy, and that's why nature acts the secured real normal way of nature, and that's why nature provided for all of us to live, everything in the world of ours. So did nature provide for all of us plenty of space, plenty of food, plenty of

fresh air, plenty of water, and all kinds of gifts for all of us to be gifted, and that's what enables us to live, and that's why we survived, and that's why the rest, with everything that there is in the World survived. It is true the most of us fear .... Nature does not fear, nor does life fear, because life changes and so must we, so must the rest change and so must everything change in different forms, as this is the law of nature and that nothing can be destroyed, nor will we be destroyed, nor will the rest be destroyed -- WHY FEAR. And that's why the greatest of the greatest followed nature's footsteps. They were gifted and they wanted us to be gifted; they lived, so did they want us to live; they occupied their brilliant minds with nature's great phenomenon; they were happy, so they wanted us to be happy; they were honest to themselves and they wanted us to be honest to ourselves. With all the difficulties in their way they sacrificed most everything in order for them to be able to teach us for all of us to follow nature's footsteps .... - The same thing applies to our great geniuses, mathematicians, great learned men and women, great philosophers, great scientists, great chemists; and .....the same applies to our great Professor Einstein, and that all of the above enumerated wanted us, rather the most of us to know .....and so were our great ex-presidents, great and honest to goodness human and humane gentlemen - the great Thomas Jefferson, Abraham Lincoln, Franklin D. Roosevelt -- the same applies to our great President, Mr. Truman, as it takes a great president to do the job. Our great president gave an order not to drop the atomic bomb and that will help us to do away with a lot of confusion and with a lot of disturbances that takes place here, there and everywhere. The same applies to our great lady, Mrs.

Roosevelt. For our great lady too performed her duties - the life's way of life - and so does our great lady follow nature's footsteps ..... So was I fortunate to meet the great genius Professor Einstein. When I looked at the genius' face it looked to me like the face of an Angel - the great genius' voice sounded to me like the voice of our marvelous infants and babies when they tell Mama dear Ma Ma or Daddy dear Kitty Cat, and I shall not forget the great genius, for the genius is more than a human being.....

Ladies and Gentlemen, let us from time to time remind ourselves of the above enumerated --- for they too gave us gifts for all of us to be gifted.

So must we congratulate from time to time our great honest to goodness President, Mr. Truman, and to wish him all the luck in the world. Our great President deserves it, and so can we congratulate ourselves that we too, the majority, had great vision to elect our great President. The voice of our great President, Mr. Truman, is peace and prosperity for all of us combined the world over. And that's what nature expected of us and from us --- to live -- to let live --- and to let others do the same.

As to the moral ----- With honey crackers we can go everywhere -- with fire crackers we can go nowhere.

Truthfully yours,
