Series 1: Franklin D. Roosevelt’s Political Ascension

File No. 470

1932 April 8

Albany, NY - Radio Speech
Albany, New York
April 8, 1932

Although I understand that I am talking under the auspices of the Democratic National Committee, I do not want to limit myself to politics. I do not want to feel that I am addressing an audience of Democrats, nor that I speak merely as a Democrat myself. The present condition of our national affairs is too serious to be viewed through partisan eyes for partisan purposes.

Fifteen years ago my public duty called me to an active part in a great national emergency -- the World War. Success then was due to a leadership whose vision carried beyond the timorous and futile gesture of sending a tiny army of 150,000 trained soldiers and the regular Navy to the aid of our Allies.

The generalship of that moment conceived of a whole nation mobilized for war, economic, industrial, social and military resources gathered into a vast unit, capable of and actually in the process of throwing into the scales 10,000,000 men equipped with physical needs and sustained by the realization that behind them were the united efforts of 110,000,000 human beings. It was a great plan because it was built from bottom to top and not from top to bottom.
This is a transcript made by the White House stenographer from his shorthand notes taken at the time the speech was made. Underlining indicates words extemporaneously added to the previously prepared reading copy text. Words in parentheses are words that were omitted when the speech was delivered, though they appear in the previously prepared reading copy text.

Although I desperately want to limit my remarks to politics, I do not want to feel that I am accountable only for the present and past, although I deeply believe in a Democratic majority. The present conflict in our national policy to go neither to the extreme left nor extreme right.

We see today, and are living today, a great unfulfilled mission of our American people. We must face the fact that we are not yet a power in the world in which we can effectively counter the threats that lie ahead. We may very well see the time when the United States takes our rightful place among the nations of the world.

The reports of the draft commission and the reports of the Select Committee on Post-War Planning, as well as the reports of the Select Committee on Foreign Relations, and the reports of the Select Committee on International Organizations, reflect the growing concern in this country about the future of our world and the fate of mankind.
In my calm judgment, the nation faces today a more grave emergency than in 1917.

It is said that Napoleon lost the Battle of Waterloo because he forgot his infantry. He staked too much upon the more spectacular but less substantial cavalry.

The present Administration in Washington provides a close parallel. It has either forgotten or it does not want to remember the infantry of our economic army.

These unhappy times call for the building of plans that rest upon the forgotten, the unorganized but the indispensable units of economic power, for plans like those of 1917 that build from the bottom up and not from the top down, that put their faith once more in the forgotten man at the bottom of the economic pyramid.

Obviously, these few minutes tonight permit no opportunity to lay down the ten or a dozen closely related objectives of a plan to meet our present emergency, but I can draw a few essentials, a beginning, in fact, of a planned program.

It is the habit of the unthinking to turn in times like this to the illusions of economic magic. People suggest that a huge expenditure of public funds by the Federal Government and by State and local governments will completely solve the unemployment problem. But it is clear that even if we could raise many billions of dollars and find definitely
useful public works to spend these billions on, even all that money would not give employment to the 7,000,000 or 10,000,000 people who are out of work.

Let us admit frankly that it would be only a stopgap. A real economic cure must go to the killing of bacteria in the system rather than to the treatment of external symptoms.

How much do the shallow thinkers realize, for example, that approximately one-half of our population, fifty or sixty million people, earn their living by farming or in small towns where existence immediately depends on farms. They have today lost their purchasing power. Why? They are receiving for farm products less than the cost to them of growing these farm products.

The result of this loss of purchasing power is that many other millions of people engaged in industry in the cities cannot sell industrial products to the farming half of the nation. This brings home to every city worker that his own employment is directly tied up with the farmer's dollar. No nation can long continue half bankrupt. Main Street, Broadway, the mills, the mines will close if half of the buyers are broke.

I cannot escape the conclusion that one of the essentials of a national program of restoration must be to restore purchasing power to the farming half of the country.
Without this the wheels of railroads and of factories will not turn.

Closely associated with this first objective is the problem of keeping the home-owner and the farm-owner where he is, without being dispossessed through the foreclosure of his mortgage.

His relationship to the great banks of Chicago and New York is pretty remote. The two billion dollar fund which President Hoover and the Congress have put at the disposal of the big banks, the railroads and the corporations of the nation is not for him.

His is a relationship to his little local bank or local loan company. It is a sad fact that even though the local lender in many cases does not want to evict the farmer or home-owner by foreclosure proceedings, he is forced to do so in order to keep his bank or company solvent. Here should be an objective of government itself, to provide at least as much assistance to the little fellow as it is now giving to the large banks and corporations. That is another example of building from the bottom up.

One other objective closely related to the problem of selling American products is to provide a tariff policy based upon economic common sense rather than upon politics -- not air -- pull.
This country during the past few years, culminating with the Hawley-Smoot Tariff of 1929, has compelled the world to build tariff fences so high that world trade is decreasing to the vanishing point. The value of goods internationally exchanged is today less than half of what it was three or four years ago.

Every man and woman who gives any thought to the subject knows that if our factories run even 80 per cent of capacity they will turn out more products than we as a nation can possibly use ourselves.

The answer is that if they are to run on 80 per cent of capacity we must sell some goods abroad. How can we do that if the outside nations cannot pay us in cash -- and we know by sad experience that they cannot do that. The only way they can pay us is in their own goods or raw materials, but this foolish tariff of ours makes that impossible.

What we must do is this: To revise our tariff on the basis of a reciprocal exchange of goods, allowing other nations to buy and to pay for our goods by sending us such of their goods as will not seriously throw any of our industries out of balance, and, incidentally, making impossible in this country the continuance of pure monopolies which cause us to pay excessive prices for many of the necessities of life.
Such objectives as these three -- restoring farmers' buying power, relief to the small banks and homeowners and a reconstructed tariff policy -- these are only a part of ten or a dozen vital factors.

But they seem to be beyond the concern of a National Administration which can think in terms only of the top of the social and economic structure. They have sought temporary relief from the top down rather than permanent relief from the bottom up. They have totally failed to plan ahead in a comprehensive way. They have waited until something has cracked and then at the last moment have sought to prevent total collapse.

It is high time to get back to fundamentals. It is high time to admit with courage that we are in the midst of an emergency at least equal to that of war. Let us mobilize to meet it.

The Forgotten Man
Albany, New York - April 3, 1932

Although I understand that I am talking under the auspices of the Democratic National Committee, I do not want to limit myself to politics. I do not want to feel that I am addressing an audience of Democrats, nor that I speak merely as a Democrat myself. The present condition of our national affairs is too serious to be viewed through partisan eyes for partisan purposes.

Fifteen years ago my public duty called me to an active part in a great national emergency — the World War. Success then was due to a leadership whose vision carried beyond the timorous and futile gesture of sending a tiny army of 150,000 trained soldiers and the regular Navy to the aid of our Allies.

The generalship of that moment conceived of a whole nation mobilized for war, economic, industrial, social and military resources gathered into a vast unit, capable of and actually in the process of throwing into the scales 10,000,000 men equipped with physical needs and sustained by the realization that behind them were the united efforts of 110,000,000 human beings. It was a great plan because it was built from bottom to top and not from top to bottom.

In my calm judgment, the nation faces today a more grave emergency than in 1917.

It is said that Napoleon lost the Battle of Waterloo because he forgot his infantry. He staked too much upon the more spectacular but less substantial cavalry.

The present Administration in Washington provides a close parallel. It has either forgotten or it does not want to remember the infantry of our economic army.
These unhappy times call for the building of plans that rest upon the forgotten, the unorganized but the indispensable units of economic power, for plans like those of 1917 that build from the bottom up and not from the top down, that put their faith once more in the forgotten man at the bottom of the economic pyramid.

Obviously, these few minutes tonight permit no opportunity to lay down the ten or a dozen closely related objectives of a plan to meet our present emergency, but I can draw a few essentials, a beginning, in fact, of a planned program.

It is the habit of the unthinking to turn in times like this to the illusions of economic magic. People suggest that a huge expenditure of public funds by the Federal Government and by State and local governments will completely solve the unemployment problem. But it is clear that even if we could raise many billions of dollars and find definitely useful public works to spend these billions on, even all that money would not give employment to the 7,000,000 or 10,000,000 people who are out of work.

Let us admit frankly that it would be only a stopgap. A real economic cure must go to the killing of bacteria in the system rather than to the treatment of external symptoms.

How much do the shallow thinkers realize, for example, that approximately one-half of our population, fifty or sixty million people, earn their living by farming or in small towns where existence immediately depends on farms. They have today lost their purchasing power. Why? They are receiving for farm products less than the cost to them of growing these farm products.
The result of this loss of purchasing power is that many other millions of people engaged in industry in the cities cannot sell industrial products to the farming half of the nation. This brings home to every city worker that his own employment is directly tied up with the farmer's dollar. No nation can long continue half bankrupt. Main Street, Broadway, the mills, the mines will close if half of the buyers are broke.

I cannot escape the conclusion that one of the essentials of a national program of restoration must be to restore purchasing power to the farming half of the country. Without this the wheels of railroads and factories will not turn.

Closely associated with this first objective is the problem of keeping the home-owner and the farm-owner where he is, without being dispossessed through the foreclosure of his mortgage.

His relationship to the great banks of Chicago and New York is pretty remote. The two billion dollar fund which President Hoover and the Congress have put at the disposal of the big banks, the railroads and the corporations of the nation is not for him.

His is a relationship to his little local bank or local loan company. It is a sad fact that even though the local lender in many cases does not want to evict the farmer or home-owner by foreclosure proceedings, he is forced to do so in order to keep his bank or company solvent. Here should be an objective of government itself, to provide at least as much assistance to the little fellow as it is now giving to the large banks and corporations. That is another example of building from the bottom up.

One other objective closely related to the problem of selling American products is to provide a tariff policy based upon economic common
sense rather than upon politics — hot air — pull.

This country during the past few years, culminating with the Hawley-Smoot Tariff of 1929, has compelled the world to build tariff fences so high that world trade is decreasing to the vanishing point. The value of goods internationally exchanged is today less than half of what it was three or four years ago.

Every man and woman who gives any thought to the subject knows that if our factories run even 90 per cent of capacity they will turn out more products than we as a nation can possibly use ourselves.

The answer is that if they are to run on 90 per cent of capacity we must sell some goods abroad. How can we do that if the outside nations cannot pay us in cash — and we know by sad experience that they cannot do that. The only way they can pay us is in their own goods or raw materials, but this foolish tariff of ours makes that impossible.

What we must do is this: To revise our tariff on the basis of a reciprocal exchange of goods, allowing other nations to buy and to pay for our goods by sending us such of their goods as will not seriously throw any of our industries out of balance, and, incidentally, making impossible in this country the continuance of pure monopolies which cause us to pay excessive prices for many of the necessities of life.

Such objectives as these three — restoring farmers buying power, relief to the small banks and home-owners and a reconstructed tariff policy — these are only a part of ten or a dozen vital factors.

But they seem to be beyond the concern of a National Administration which can think in terms only of the top of the social and economic structure.
They have sought temporary relief from the top down rather than permanent relief from the bottom up. They have totally failed to plan ahead in a comprehensive way. They have waited until something has cracked and then at the last moment have sought to prevent total collapse.

It is high time to get back to fundamentals. It is high time to admit with courage that we are in the midst of an emergency at least equal to that of war. Let us mobilize to meet it.
Although I understand that I am talking under the auspices of the Democratic National Committee, I do not want to limit myself to politics. I do not want to feel that I am addressing an audience of Democrats, nor that I speak merely as a Democrat myself. The present condition of our national affairs is too serious to be viewed through partisan eyes for partisan purposes.

Fifteen years ago my public duty called me to an active part in a great national emergency -- the World War.
