1932 September 21

Portland, OR - Campaign Address
ADDRESS OF GOVERNOR FRANKLIN D. ROOSEVELT
Municipal Auditorium, Portland, Oregon
September 21, 1932, 6:58 P.M.

My friends, I have journeyed many times to this beautiful Pacific Coast, but I want to assure you that I have never comprehended, as I have this time, the warmth of your hospitality, the greatness of your resources and opportunities and, I want to add with all earnestness, the great importance of the problem that I am discussing tonight.

I have come, not primarily to speak but, rather, to hear -- not to teach, but to learn. I want to hear of your problems, to understand them and to consider them as they bear on the larger scene of national interest.

I have strengthened the belief that I have had for a long time and that I have constantly set forth in my speeches and papers in my work as Governor of the State of New York, that the question of power, of electrical development and distribution, is primarily a national problem.

(Applause)

Speaking in the language of the Navy, with which I was associated for many eventful years, I want at the outset of this discussion to take my bearings, to know my destination, to chart my course. In discussing electrical
My friends, I have been away many times to the

penniless people. I recall what I want to become the

have never contemplated, as I have the time, the

readiness of your resources and opportunities and I want to talk of them, or the

expected importance of the problems that are geologically complex.

I have come, not primarily to speak out, but rather
to learn - not to teach. Just to learn. I want to hear at

your knowledge, to understand them, and to cooperate with them as

they play on the former scene of national interest.

I have emphasized the better fact that I have had

for a long time any that I have necessarily read in my

senses and because in my work as Governor of the State of

New York, that the operation of power, or executive power -
does not yield information to another, it is inextricable,

(Applause)

speech in the language of the talk, with which

I am associated for many years. Anyway, I want to be

subject at first presentation to take my comments, to make my

contribution to part for some. In agreement, I should not
power, the speaker, like a ship sailing in dangerous waters, must avoid not only unseen shoals and rocky reefs -- he must also be on his guard against false lights on the shore. His only protection against all of these dangers is to set squarely and fairly before him the course that he must steer. Let me do that in a few sentences.

As I see it, the object of government is the welfare of the people. The liberty of people to carry on their business should not be abridged unless the larger interests of the many are concerned; (where) when the interests of the many are concerned the interests of the few must yield. (Applause) It is the purpose of the government to see not only that the legitimate interests of the few are protected but that the welfare and rights of the many are conserved. (Applause) These are the principles which we must remember in any consideration of this question. This, I take it, is sound government -- not politics. Those are the essential basic conditions under which government can be of service.

It is scarcely necessary to tell you this out here on the Pacific Coast. In no other section of the country has there been a greater interest in government and a more intelligent application of the principles of sound government in its legislation in the action of the administrative
authorities, and nowhere, may I add, are the people less bound by mere political factionalism than here.

When questions like these are under consideration, we are not Democrats, we are not Republicans -- we are a people united in a common patriotism. This is the spirit of my entire campaign. If the spirit and the method that I am applying to public questions is in line with that of progressive citizens of parties other than my own, I invite them to join me now, as I have invited them many times before. In the face of present national emergencies we must distinguish between parties and their leaders.

When the great possessions that belong to all of us -- that belong to the Nation -- are at stake, we are not partisans, we are Americans. (Applause)

It is, therefore, fitting that I should choose this great State of the Coast to set forth my ideas respecting the question of electrical power and to discuss it not only with you here in Portland and in Oregon, but with all of the people in all of the states to whom this subject is a concern affecting their individual lives.

This subject has been discussed so much in complex languages, in terms which only a lawyer can understand, or in figures which only accountants can understand, that
there is need for bringing it back into the realm of simple, honest terms understood by millions of our citizens.

This is particularly true because there has not only been lack of information -- and information difficult to understand -- but there has been in the past few years, as the Federal Trade Commission has shown, a systematic, subtle, deliberate and unprincipled campaign of misinformation, of propaganda, and, if I may use the words, of lies and falsehood. The spreading of this information has been bought and paid for by certain great private utility corporations. It has permeated the schools, the editorial columns of newspapers, the activities of political parties, the universities and the printed literature in our book stores. A false public policy has been spread throughout the land, through the use of every means, from the innocent school teacher down to a certainly less innocent former chairman of the Republican National Committee itself.

Let us go back to the beginning of this subject. What is a public utility? Let me take you back three hundred years to old King James of England. The reign of this king is remembered for many great events -- two of them in particular. He gave us a great translation of the Bible, and, through his Lord Chancellor, a great statement of
public policy. It was in the days when Shakespeare was writing Hamlet and when the English were settling Jamestown, (when) that a public outcry rose in England from travellers who sought to cross the deeper streams and rivers by means of ferry-boats. Obviously these ferries, which were needed to connect the highway on one side with the highway on the other, were limited to specific points. They were, therefore, as you and I can understand, monopolistic in their nature. The ferry-boat operators, because of the privileged position which they held, had the chance to charge whatever the traffic would bear, and bad service and high rates had the effect of forcing much trade and travel into long detours or to the dangers of attempting to ford the streams.

The greed and avarice of some of these ferry-boat owners was made known by an outraged people to the King himself, and he invited his great judge, Lord Hale, to advise him.

The old law Lord replied that the ferrymen's business was quite different from other businesses, that the ferry business was, in fact, vested with a public character, that to charge excessive rates was to set up obstacles to public use, and that the rendering of good
service was a necessary and public responsibility. Here's what he said in his own words, three hundred years ago:

"Every ferry", said Lord Hale, "ought to be under a public regulation, to-wit: that it give attendance at due time, keep a boat in due order, and take but reasonable toll."

(Appause)

In those simple words, my friends, Lord Hale laid down a standard which, in theory at least, has been the definition of common law with respect to the authority of government over public utilities from that day down to this.

With the advance of civilization, many other necessities of a monopolistic character have been added to the list of public utilities. Such necessities as railroads, street railways, pipelines and, more laterally, the distribution of gas and electricity.

Now, the principle was accepted, firmly established, and became a basic part of our theory of government long before the Declaration of Independence itself. The next problem was how to be sure that the services of this kind should be satisfactory and cheap enough while at the same time making possible the safe investment of (new) private capital.

For more than two centuries, the protection of
the public was (through) vested in legislative action, but with the growth of the use of public utilities of all kinds in these later days, a more convenient, direct and scientific method had to be adopted -- a method which you and I now know as control and regulation by public service or public utility commissions.

Let me make it clear that I have no objection to the method of control through a public service commission. It is, in fact, a proper way for the people themselves to protect their interests. But in practice, (however) my friends, it has in many instances departed from its proper sphere of action, and, I may add, has departed from its theory of responsibility. It is an undoubted and undeniable fact that in our modern American practice the public service commissions of many states have often failed to live up to the very high purpose for which they were created. In many instances their selection has been obtained by the public utility corporations themselves. And we can prove it! (Applause) Yes, these corporations have often influenced to the prejudice of the public the actions of public service commissions. And, moreover, some of the commissions have, either through deliberate intent or through sheer inertia, adopted a theory, a conception of
their duties wholly at variance with the original object for which they were created.

Let me illustrate: When I became Governor, I found that the Public Service Commission of the State of New York had adopted the unwarranted and unsound view that its sole function was to act as an arbitrator or a court of some kind between the public on the one side and the utility corporations on the other. I thereupon laid down a principle which created horror and havoc among the Insulls and other magnates of that type. (Applause)

I declared that the Public Service Commission is not a mere judicial body to act solely as umpire of some kind between complaining consumer on the one side, or the complaining investor on (the one hand) that same side, and the great public utility system on the other. (hand) I declared that, as the agent of the Legislature that informally exercised the right and the duty, (it) the Public Service Commission had, and has, a definitely delegated authority to act as the agent of the public themselves. (Applause) That is to say, my friends, it is not a mere arbitrator as between the people and the public utilities, but was created for the purpose of seeing that the public utilities do two things: first, give service; second, charge
reasonable rates. That, in performing this function, it must act as agent of the public upon its own initiative as well as upon petition to investigate the acts and the rates of public utilities relative to service, (and) rates, etc., and to enforce adequate service and reasonable rates. (Applause)

The regulating commission, my friends, must be a Tribune of the people, putting its engineering, its accounting and its legal resources into the breach for the purpose of getting the facts and doing justice to both the consumers and investors in public utilities. (Applause)

This means, when that duty is properly exercised, positive and active protection of the people against private greed! (Applause)

So much, my friends, for the simple, clear and definite theory of regulation -- a theory which today is observed, I am sorry to say, more in the breach than in the observance.

Now, I come to another principle which, in spite of having been befogged and bedevilled by many utility companies -- and, I am sorry to say, by many of our courts as well -- is nevertheless clear and simple when you get down to the roots of it.
The ferryman of old, under King James, through regulation and control of the government, was compelled to give fair service -- good service for a fair return on his labor and a fair return on his property. It is only in recent days that the direct descendants of the old English ferryman have in hundreds of cases found ways of paying to themselves inordinate and unreasonable profits and overcapitalizing their equipment, three, five -- yes, even ten (times) fold the money which they themselves have put into it. And you and I know that is a fact! (Applause)

Now, I am not going to confuse the issue by setting forth a lot of figures, but I do ask you to remember a few simple facts which are so tremendously important in our economic life.

Our good friend, Senator Norris, of Nebraska, (applause) using the figures of the Federal Trade Commission, summarizes this in a great speech in the Senate of the United States -- only two months ago. He pointed out the overcapitalization of many companies by name in definite figures and summed up for discussion by setting forth in round numbers that these main companies had been found to be overcapitalized to the extent of $520,000,000!

What does it mean? (This) it means, my friends,
that the people of the United States were called upon to supply profits upon this amount of watered stock. It meant that someone was deriving profits from the capitalization into which they had put no substantial capital itself. It means that the people had to pay these unjust profits through higher rates.

As Senator Norris eloquently pointed it out, on the floor of the Senate, in these words: "Just try to comprehend what that means. With the investigation only partially finished, the Federal Trade Commission has disclosed 'write-ups' -- and this means water -- in round numbers to the amount of five hundred and twenty million dollars upon which the poor people, the common people, must pay a profit for all times -- not for a day, not for a year, but unless some change is made in public authority, it must be paid forever." (Applause) And Senator Norris added this: "As I showed yesterday in the beginning, all this investigation would have been stopped -- meaning the investigation by the Federal Trade Commission -- if President Hoover had his way. He is opposed to it all." (Applause)

These were the deliberate spoken words of Senator Norris on the floor of the United States Senate July 14, 1932, a permanent record for the benefit of the American people -- uncontroverted and uncontrovertible!
Let us consider for a moment the vast importance of the American utilities in our economic life; and in this, I am not including the railroads and other transportation companies, (which) because I have already discussed these figures. The utility industry in 1931 collected over four billion dollars in one year from the users of electricity, gas, telephone and telegraph. That means an average of $133 from each and every family in the United States.

According to the figures of the industry itself, the American public has invested nearly twenty-three billions in public utilities, again excluding the railroads -- which amount to about eleven billions more.

(Of this sum, nearly eight billions were invested in the electric light and power industry alone, during the five years that preceded the stock market collapse in 1929. Compare this, if you will, with eleven billions invested in the railroads, nine billions in farm mortgages and with the national debt of the United States itself, which was something slightly less than this investment in public utilities.)

You will readily see that this "lusty younger child" of the United States needs to be kept very closely under the watchful eye of its parent -- the people of the United States. (Applause)
But these cold figures do not measure the human importance of the electric power in our present social order. Electricity is no longer a luxury -- it is a definite necessity. It lights our homes, our places of work and our streets. It turns the wheels of most of our transportation and our factories. In (the) our homes it serves not only for light, but it can become the willing servant of the family in countless ways. People back home in my State are still figuring to themselves when I got seven or five hundred thousand majority. It can indeed relieve the drudgery of the housewife and lift the great burden off the shoulders of the hardworking farmer.

I say "can become" because we are most certainly backward in the use of electricity in our American homes and on our farms. In Canada the average home uses twice as much electric power per family as we do in the United States. And I want to bring us up to the level of Canada in this connection. (Applause)

Now, let us ask the question: What prevents our American people taking full advantage of this great economic and human agency? The answer is simple. It is not because we lack undeveloped water power or unclaimed supplies of coal and oil.
The reason is that we cannot take advantage of our own possibilities -- the reason is frankly and definitely because many selfish interests in control of light and power industries have not been sufficiently farsighted to establish water rates low enough to encourage widespread public use. (Applause) I wish that every community in the United States could have rates as low as you have them here in Portland. But, taking it by and large, the price you pay for your utility service is a determining factor in (your) the amount they use (of) it.

Low prices to the domestic consumer will result in (their) using far more electrical appliances than (he does) you do today. Again let me speak plainly. Through lack of vigilance in state capitals and in the national government, we have allowed many utility companies to get around the common law, to capitalize themselves without regard to actual investment made in property, to pyramid capital through holding companies and without restraint of law, to sell billions of dollars of securities which the public have been falsely led into believing were properly supervised by the government itself.

And now for a personal word. I am speaking to you as the Governor of (a) the State of New York, who for
four years has been attacked by the propaganda of certain utility companies as a dangerous man. I have been attacked for pointing out the same plain economic facts that I state here tonight.

My answer has been, as it is tonight, to point out these plain principles that seek to protect the welfare of the people against selfish greed. If that be treason, my friends, then make the most of it! (Applause)

But, I have found new converts to my treason.

The President's Federal Trade Commission has just come out with a report which, if I am not mistaken, is a last-minute effort to fall in line with the plain implication of the present understanding -- the present temper, of the public of this country. Some of its conclusions bear careful reading, in the light of what the President has said on many occasions in the past.

Back in 1925, the then Secretary of Commerce, now the President, said: "Nothing could be more hideous extension of centralization in Federal government than those to undermine state utility commissions and state responsibility."

Somewhat later he said: "The argument is sometimes used that the power situation is parallel with the railroads where federal regulation has been found absolutely necessary."
This is an illusion. It differs in several profound respects. Power has no such interstate implication as transportation. Furthermore, there has been outrageous exaggeration of the probable extent of interstate power. For economic reasons these power districts will, in but few cases, reach across state lines."

Thus, my friends, spoke the present President of the United States in opposition to federal regulation and control of any power public utilities. His statement of facts then are now contradicted by his own Federal Power Commission.

(It) That Commission states what I have long been saying, that power has grown into interstate business of vast proportions and requires the strict regulation and control of the Federal government. (They) The Commission says -- "analysis of information furnished by ninety-one holding companies shows that forty-eight major projects under public utilities are subject to control by ten top companies and these ten groups serve 12,478 communities with a population of more than forty-two million people." (Applause) I think I have proved my point! (Applause)

Now, let me give you an illustration. Not only to show the vast extent of operations of some of these
great companies, but the unsound conditions created by the policies of the federal non-interference which the President of the United States still so valiantly maintains.

The crash of the Insull empire has given excellent point to the truth of what I have been arguing for a four long (time) years.

(The) That great "Insull monstrosity", made up of a group of holding and investing companies so long, and exercising control over hundreds of thousands of operating companies, had distributed securities among hundreds of thousands of investors, and had taken their money to an amount running over one and a half billions of dollars -- not millions, but billions!

(The) That "Insull monstrosity" grew during the years of prosperity until it reached a position where it (was) is an important factor in the lives of millions of our people. The name was magic. The investing public did not realize then, as it does (now) today, that the methods used in the building up of these holding companies were wholly contrary to every sound public policy.

They did not realize that there had been arbitrary write-ups of assets and inflation of vast capital accounts. They did not realize that excessive prices had
been paid for property acquired. They did not realize that the expense of financing had been capitalized. They did not realize that payments of dividends had been made out of capital. **Think of it!** They did not realize that sound subsidiaries had been milked and milked to keep alive the weaker sisters in the great chain. They did not realize that there had been borrowings and lendings -- an interchange of assets, of liabilities and of capital between the component parts of the whole. They did not realize that all these conditions necessitated terrific overcharges for service(s) by these corporations.

The Insull failure has (opened our) done more to open the eyes of the American public to the truth than anything that has happened. It shows us that the development of these financial monstrosities was such as to compel **inevitable and ultimate ruin;** that practices had been indulged in that suggest the old days of railroad wild-catting; that private manipulation had outsmarted the slow-moving power of government.

As always, the public paid and paid dearly. As always, the public is beginning to understand the need for reform after the same public has been fleeced out of millions of dollars.
I have spoken on several occasions of a "new deal" for the American people. (Hurrah! Prolonged applause) And I am not going to stop talking about it! (Applause) I believe that the "new deal", as you and I know it, can be applied to a whole lot of things. It can be applied very definitely, my friends, to the relationship between the electric utilities on the one side, and the consumer and the investor on the other. (Applause)

(True regulation is for the equal benefit of the consumer and the investor, and the only man who will suffer from true regulation is the speculator, or the unscrupulous promoter who levies tribute equally from the man who buys the service and from the man who invests his savings in this great industry.)

Then I am putting the consumer and the investor, the honest investor, right together in the same boat. (Applause)

I seek to protect both the consumer and the investor. To that end I now propose and advocate (now), as I have proposed and advocated heretofore, the following remedies on the part of the government for the regulation and control of public utilities engaged in the power business
and companies and corporations relating thereto:

First: Full publicity as to all capital issues of stocks, bonds and other securities; liabilities and indebtedness, capital investment; and frequent information as to gross and net earnings. In other words, let us "turn on the light"! (Applause)

Second: Publicity on stock ownership of stocks and bonds and other securities, including -- and this is a new one -- the stock and other interest of (all) every officer(s) and every director(s) in every company. (Applause)

Third: Publicity with respect to all intercompany contracts and services and interchange of power. Again, "letting in the light"! (Applause)

Fourth: Regulation and control of holding companies by Federal Power Commission and the same publicity with regard to such holding companies as provided for the operating companies. (Applause)

Fifth: Cooperation of Federal Power Commission with Public Utilities Commissions of the several states, obtaining information and data pertaining to the regulation and control of such public utilities. And I speak with experience, as Governor of a State!
Sixth: Regulation and control of the issue of stocks and bonds and other securities on the principle of prudent investment only.

Seventh: Now, this is a technical matter, but it goes to the root of the subject. Abolishing by law the so-called reproduction cost theory for rate-making, and establishing in place of it the actual money prudent-investment principle as the basis for rate-making. (Applause)

Eighth, and lastly: Legislation making it a crime to publish or circulate false or deceptive matter relating to public utilities, or public utility commissions anywhere, and at any time. (Applause)

And, now, I come (now) come to the (other) last great problem of the relationship of the Government to the development through Government itself of power resources and power manufacture.

I do not hold with those who advocate Government ownership or Government indiscriminate operation of all utilities. I state to you categorically that as a broad general rule the development of utilities should remain, with certain exceptions, a function for private initiative and private capital.
But the exceptions are of vital importance, local, state and national, and I believe that the overwhelming majority of the people in this country agree with me.

Again we must go back to first principles: A utility is in most cases a monopoly, and it is by no means possible in every case for Government to insure at all times from mere inspection, supervision and regulation that the public shall at all times get a fair deal -- in other words, to insure adequate service and reasonable rates.

I therefore lay down the following principle: That where a community -- a city or county or a district -- is not satisfied with the service rendered or the rates charged by the private utility, it has the undeniable basic right, as one of its functions of government, one of its functions of home rule, to set up, after a fair referendum of its voters has been taken, its own governmentally owned and operated service. (Applause)

That right has been recognized in (most) a good many of the states of the Union. But its general recognition by every state will hasten the day of better service and lower rates. It is perfectly clear to me, and to every thinking citizen, that no community which is sure that it is now being served well, and at reasonable rates by a
private utility company will seek to build or operate its own plant. But on the other hand the very fact that a community can, by vote (of) through the electorate, create a yardstick of its own, will, in most cases, guarantee good service and low rates to its population. I might call the right of the people to own and operate their own utility something like this -- a "birch rod" in the cupboard to be taken out and used only when the "child" gets beyond the point where a mere scolding (does) doesn't do any good. (Prolonged applause)

Now, that is the principle that applies to communities and districts, and I would apply the same principles to the Federal and State Governments.

State owned or Federal owned power sites can and should and must properly be developed by government itself. (Applause) And this has been my policy in the State of New York for four years. When so developed by Government, private capital should, I believe, be given the first opportunity to transmit and distribute the power on the basis of the best service and the lowest rates to give a reasonable profit only. The right of the Federal Government and State governments to go further and to transmit and distribute where reasonable and good service is refused by
private capital, gives to government (viz) -- in other words, the people -- that (same very) very same essential "birch rod" about which I have been talking, just set aside in the cupboard. (Applause)

This Nation, through its Federal Government, has sovereignty over vast water power resources, in many parts of the United States. A very few of these are in process of development. A few more are in the (stage of) blue print(s) stage, and many others (have not) haven't even been surveyed.

We have undertaken the development of the Boulder Dam on the Colorado River. The power will be sold by the United States Government at a cost that will return the Government investment with 4% interest in fifty years. (States and municipalities were given a prior right to contract the power so generated.)

Long before that we undertook the development at Muscle Shoals, and all that we have got out of it has been a series of Presidential vetoes. We have spent millions on this project.

(The 1930 session of Congress passed the bill introduced by Senator Norris for public operation of Muscle Shoals. President Hoover vetoed the Norris Bill and
subsequently appointed another "commission" favorable to the power interests, which recommended leasing this great public project to private companies. All that President Hoover offers on this vital subject as set forth in his acceptance speech is contained in the sentence, "I have opposed the Government undertaking the operation of the power business and I shall continue in this opposition."

In contrast, let me repeat the position which I took (in my first inaugural address as) when I was first inaugurated Governor (of New York) in January (1), 1929, and which I have maintained ever since. I said then, and I say now, "The water power of the state should belong to all the people. The title to this power must rest forever in the people. No commission -- not the Legislature itself -- has any right to give, for any consideration whatever, a single potential kilowatt in virtual perpetuity to any person or corporation whatever. (Applause) It is the duty of our representative bodies to see that this power is transferred into usable electrical energy and distributed at the lowest possible cost. It is our power -- and no inordinate profits must be allowed to those who act as the people's agent in bringing this power to their homes and workshops."
We have, as all of you in this section of the country know, the vast possibilities of power development on the Columbia River. (Applause) And I state, in definite and certain terms, that the next great hydro-electric development to be undertaken by the Federal Government must be that on the Columbia River. (Prolonged applause)

This vast water power can be of incalculable value to this whole section of the country. It means cheap manufacturing production, economy and comfort on the farm and in the household. Your problem with regard to this great power is similar to our problem in the State of New York with regard to the power development of the St. Lawrence River.

Here you have the clear picture of four great government power developments in the United States -- the St. Lawrence River in the Northeast, Muscle Shoals in the Southeast, the Boulder Dam project in the Southwest, and finally, but by no means the least of them, the Columbia River in the Northwest. (Applause) (Each one of these) And from there, my friends, in each of the four quarters of the United States, there will (be) exist forever a national yardstick to prevent extortion against the public and to encourage the wider use of that servant of the American people -- (electricity) electric power. (Applause)
(The power issue, when vigorously handled in the public interest, means abundant and cheaper current for American industry, reduced rates and increased use in millions of urban and rural homes and preservation of our water power resources in coordination with flood control, reclamation and irrigation. The American people have a vital stake in the proper handling of this issue. On the one hand we have the record of the present Republican administration. It proposes to continue as in the past to allow the interstate promoters and manipulators of public utilities to play fast and loose with the American public without adequate regulation or control.)

Now, I am nearly through. Although the President, in his acceptance speech, recommends the Federal regulation of interstate power, he has in the past, and as Secretary of Commerce in the Harding and Coolidge Cabinets, opposed Federal regulation of interstate holding and transmission companies. He has been silent on the non-enforcement of the Federal Water Power Act. He has been evasive on valuation method and high rates and is apparently satisfied with the present type of forty-eight different varieties of state regulation. (Applause)
Let us get the record clear. Since 1928 (my) the distinguished (opponent) gentleman who is running against me has done nothing to enforce the regulatory sections of the Federal Water Power Act. He has done nothing to block the financial operations incident to the great post-war power development as planned by its promoters. The history of the Federal Power Commission, prior to the creation of a full-time commission under the Couzens bill, after a Congressional investigation, mind you; the character of the appointments made when this Commission took office, the Muscle Shoals veto, and the closing of the White House doors to the public interest in the St. Lawrence project -- all demonstrate that the (Republican) policy of the present Republican leadership is dominated by private rather than public interest. (Prolonged applause)

(In 1925 Secretary Hoover said that while there was a considerable amount of speculation going on, especially in the stocks of holding companies, he wished to make it clear that with an intelligent state regulation neither watered capital nor speculation could affect the rates paid by consumers and that there was no need for Federal control.)
While President Hoover now urges Federal control, no administration bill has been introduced in Congress in the past four years. (Applause)

My distinguished opponent is against giving (the) Federal Government in any case the right to operate their own power business. I favor giving the people this right where and when it is essential to protect them against inefficient service or exhorbitant charges.

As an important part of this policy the natural hydro-electric power resources belonging to the people of the United States, or the several states, shall remain forever in their possession. (Applause)

To the people of this country I have but one answer on this subject. My friends, judge me by the enemies I have made. (Cheers, prolonged applause) Yes, judge me by the selfish purposes of these utility leaders who have talked of radicalism while they were selling watered stock to the people and using our schools to deceive the coming generation. (Prolonged applause)

My friends, my policy is as radical as American liberty is radical! Yes! My policy is as radical as the Constitution of the United States.
I promise you this, my friends: Never shall the Federal Government part with its sovereignty (and) nor part with its control over its power resources while I am President of the United States. (Prolonged applause)
POWER
Protection of the Public Interest

Governor Franklin D. Roosevelt's Speech at Portland, Oregon

SEPTEMBER 21, 1932

Issued by
THE DEMOCRATIC NATIONAL COMMITTEE
Hotel Biltmore, New York City
I HAVE journeyed many times to this beautiful Pacific Coast but I want to assure you that I have never comprehended, as I have this time, the warmth of your hospitality, the greatness of your resources and opportunities and, I want to add with all earnestness, the great importance of the problem that I am discussing tonight.

I have come, not primarily to speak but, rather, to hear—not to teach, but to learn. I want to hear of your problems, to understand them and to consider them as they bear on the larger scene of national interest.

I HAVE strengthened the belief that I have had for a long time, and that I have constantly set forth in my speeches and papers in my work as Governor of the State of New York, that the question of power, of electrical development and distribution is primarily a national problem.

Speaking in the language of the navy, with which I was associated for many eventful years, I want at the outset of this discussion to take my bearings, to know my discussion, to chart my course.

In discussing electrical power, the speaker, like a ship sailing in dangerous waters, must avoid not only unseen shoals and rocky reefs; he must also be on his guard against false lights on the shore. His only protection against all of these dangers is to set squarely and fairly before him the course that he must steer. Let me do that in a few sentences.

AS I see it, the object of government is the welfare of the people. The liberty of people to carry on their business should not be abridged unless the larger interests of the many are concerned. The interests of the few must yield. It is the purpose of government to see not only that the legitimate interest of the few are protected but that the welfare and rights of the many are conserved.

These are the principles which we must remember in any consideration of this question. This, I take it, is sound government—not politics. Those are the essential basic conditions under which government can be of service.

It is scarcely necessary to tell you this out here on the Pacific Coast. In no other section of the country has there been a greater interest in government and a more intelligent application of the prin-
principles of sound government in its legislation and in the action of the administrative authorities; and nowhere, may I add, are the people less bound by mere political factionalism than here.

WHEN questions like these are under consideration, we are not Democrats, we are not Republicans—we are a people united in a common patriotism. This is the spirit of my entire campaign. If the spirit and the method that I am applying to public questions is in line with that of progressive citizens of parties other than my own, I invite them to join me now, as I have invited them many times before. In the face of present national emergencies we must distinguish between parties and their leaders.

When the great possessions that belong to all of us—that belong to the nation—are at stake, we are not partisans, we are Americans.

It is, therefore, fitting that I should choose this great State of the Coast to set forth my ideas respecting the question of electrical power, and to discuss it not only with you here in Portland and in Oregon, but with all the people in all of the States to whom this subject is a concern affecting their individual lives.

THIS subject has been discussed so much in complex language, in terms which only a lawyer can understand, or in figures which only accountants can understand, that there is need for bringing it back into the realm of simple, honest terms understood by millions of our citizens.

This is particularly true because there has not only been lack of information—and information difficult to understand—but there has been in the past few years, as the Federal Trade Commission has shown, a systematic, subtle, deliberate and unprincipled campaign of misinformation, of propaganda, and, if I may use the words, of lies and falsehood.

The spreading of this information has been bought and paid for by certain great private utility corporations. It has permeated the schools, the editorial columns of newspapers, the activities of political parties, the universities and the printed literature in our book stores.

A false public policy has been spread throughout the land, through the use of every means, from the innocent school teacher down to a certainly less innocent former chairman of the Republican National Committee itself.

LET us go back to the beginning of this subject. What is a public utility? Let me take you back 300 years to old King James of England.

The reign of this King is remembered for many great events, two of them in particular. He gave us a great translation of the Bible and through his chancellor, a great statement of public policy. It was in the days when Shakespeare was writing Hamlet and when the English were settling Jamestown, when a public outcry arose in England from travelers who sought to cross the deeper streams and rivers by means of ferryboats.

Obviously these ferries, which were needed to connect the highway on one side with the highway on the other, were limited to specific points. They were, therefore, monopolistic in their nature.

The ferryboat operators, because of the privileged position which they held, had the chance to charge whatever the traffic would bear, and bad service and high rates had the effect of forcing much trade and travel into long detours or to the dangers of attempting to ford the streams.

The greed and avarice of some of these ferryboat owners was made known by an outraged people to the King, and he invited his great judge, Lord Hale, to advise him.

THE old law lord replied that the ferrymen’s business was quite different from other businesses, that the ferry business was, in fact, vested with a public character, that to charge excessive rates was to set up obstacles to public use, and that the rendering of good service was a necessary and public responsibility.

"Every ferry," said Lord Hale, "ought to be under a public regulation, to wit, that it give attendance at due time, keep a boat in due order and take but reasonable toll."

In those simple words, my friends, Lord Hale laid down a standard which, in theory at least, has been the definition of common law with respect to the authority of government over public utilities from that day to this.

WITH the advance of civilization, many other necessities of a monopolistic character have been added to the list of public utilities—such necessities as railroads, street railways, pipelines and the distribution of gas and electricity.

For Cheap Public Service The principle was accepted, firmly established, and became a basic part of our theory of government.
The next problem was how to be sure that the services of this kind should be satisfactory and cheap enough, while, at the same time, making possible the safe investment of new capital.

For more than two centuries the protection of the public was through legislative action, but, with the growth of the use of public utilities of all kinds, a more convenient, direct and scientific method had to be adopted—a method which you and I know as control and regulation by public service or public utility commissions.

Let me make it clear that I have no objection to the method of control through a public service commission. It is, in fact, a proper way for the people themselves to protect their interests.

Favors Commissions

In practice, however, it has in many instances departed from its proper sphere of action and, I may add, from its theory of responsibility.

It is an undoubted and undeniable fact that, in our modern American practice, the public service commissions of many States have often failed to live up to the high purpose for which they were created.

In many instances their selection has been obtained by the public utility corporations themselves. These corporations have often influenced, to the prejudice of the public, the actions of public service commissions.

Moreover, some of the commissions have, either through deliberate intent or through sheer inertia, adopted a theory, a conception, of their duties wholly at variance with the original object for which they were created.

Let me illustrate: When I became Governor I found that the Public Service Commission of the State of New York had adopted the unwarranted and unwarranted theory that its sole function was to act as an arbitrator or a court between the public on the one side and the utility corporations on the other.

I thereupon laid down a principle which created horror and havoc among the Insulls and other magnates of that type. I declared that the Public Service Commission is not a mere judicial body to act solely as umpire between complaining consumer or complaining investor on the one hand and the great public utility system on the other hand.

I declared that, as the agent of the Legislature, it has delegated authority to act as the agent of the public; that it is not a mere arbitrator, as

between the people and the public utilities, but was created for the purpose of seeing that the utilities do two things: First give service, second charge reasonable rates; that, in performing this function, it must act as agent of the public upon its own initiative as well as upon petition to investigate the acts of public utilities relative to service and rules and to enforce adequate service and reasonable rates.

The regulating commission, my friends, must be a tribute of the people, putting its engineering, accounting, legal resources into the breach for the purpose of

Wants

People

Protected

This means positive and active protection of the people against private greed.

So much for the simple, clear, definite theory of regulation—a theory which today is honored more in the breach than in the observance.

Now I come to another principle which in spite of having been befogged and bedeviled by many utility companies—and, I am sorry to say, by many of our courts as well—is nevertheless clear and simple when you get down to the roots of it.

The ferryman of old, under King James, through regulation and control of the government, was compelled to give good service for a fair return on his labor and his property. It is only in recent days that the direct descendants of the ferryman have in hundreds of cases found ways of paying to themselves inordinate and unreasonable profits and overcapitalizing their equipment, three, five—yes even ten—times the money which they themselves have put into it.

I am not going to confuse the issue by setting forth a lot of figures, but I do ask you to remember a few facts which are so tremendously important in our economic life.

Stock

Senator Norris, using the figures of the Federal Trade Commission, summarized this in a great speech in the Senate of the United States two months ago. He pointed out the overcapitalization of many companies by name in definite figures and summed up the discussion by setting forth in round numbers these main companies had been found to be overcapitalized to the extent of $520,000,000.

This means, my friends, that the people of the United States were called upon to supply profits upon this amount of watered stock. It meant that
Some one was deriving profits from the capitalization into which they had put no substantial capital. It meant that the people had to pay these unjust profits through higher rates.

As Senator Norris eloquently pointed out on the floor of the Senate in these words: "Just try to comprehend what that means. With the investigation only partially finished, the Federal Trade Commission has disclosed 'write ups' (this means water) in round numbers to the amount of $520,000,000 upon which the poor people, the common people, must pay a profit for all time—not for a day, not for a year, but unless some change is made in public authority, it must be paid forever."

And Senator Norris added: "As I showed yesterday in the beginning, all this investigation would have been stopped if President Hoover had his way. He is opposed to it all."

These were the deliberate spoken words of Senator Norris on the floor of the United States Senate, July 14, 1932, a permanent record for the benefit of the American people—uncontroverted and uncontrovertible.

Let us consider for a moment the vast importance of the American utilities in our economic life—and in this I am not including the railroads and other transportation companies which I have already discussed. The utility industry in 1931 collected over $4,000,000,000 from the users of electricity, gas, telephone and telegraph. That means an average of $133 from each and every family in the United States.

According to the figures of the industry itself, the American public has invested nearly $29,000,000,000 in public utilities, again excluding the railroads. Of this sum, nearly $8,000,000,000 were invested in the electric light and power industry alone, during the five years that preceded the stock market collapse in 1929.

Compare this, if you will, with $11,000,000,000 invested in railroads, $9,000,000,000 in farm mortgages and with the national debt of the United States itself, which was something slightly less than this investment in public utilities. You will readily see that this 'lusty younger child' of the United States needs to be kept very closely under the watchful eye of its parent—the people of the United States.

But these cold figures do not measure the human importance of electric power in our present social order. Electricity is no longer a luxury—it is a definite necessity. It lights our homes, our places of work and our streets.

It turns the wheels of most of our transportation and our factories. In the home it serves not only for light, but it can become the willing servant of the family in countless ways. It can relieve the drudgery of the housewife and lift the great burden off the shoulders of the hard-working farmer.

I say 'can become' because we are most certainly backward in the use of electricity in our American homes and on our farms. In Canada the average home uses twice as much electric power per family as we do in the United States.

What prevents our American people taking full advantage of this great economic and human agency?

The answer is simple. It is not because we lack undeveloped water power or unclaimed supplies of coal and oil.

The reason that we cannot take advantage of our own possibilities is frankly and definitely because many selfish interests in control of light and power industries have not been sufficiently far-sighted to establish rates low enough to encourage widespread public use. The price you pay for your utility service is a determining factor in your use of it.

Low prices to the domestic consumer will result in his using far more electrical appliances than he does today. Again let me speak plainly. Through lack of vigilance over-capitalization in State capitals and in the national government, we have allowed many utility companies to get around the common law, to capitalize themselves without regard to actual investment made in property, to pyramid capital through holding companies and without restraint of law, to sell billions of dollars of securities which the public have been falsely led into believing were properly supervised by the government itself.

And now for a personal word. I am speaking to you as the Governor of a State who for four years has been attacked by the propaganda of certain utility companies as a dangerous man. I have been attacked for pointing out the same plain economic facts that I state here tonight.

My answer has been, as it is tonight, to point out these plain principles that seek to protect the welfare of the people against selfish greed. If that be treason, then make the most of it.

But I have found new converts to my treason.

The President’s Federal Trade Commission has just come out with a report which is, if I am not mistaken, a last-minute effort to fall in line with the plain implication of the present temper of the public. Some of its conclusions bear careful read-
ing, in the light of what the President has said on many occasions in the past.

In 1925, the then Secretary of Commerce, now the President, said: "Nothing could be more hideous extensions of centralization in Federal Government than those to undermine utility commissions and President's State responsibility."

Cites Record Somewhat later he said: "The argument is sometimes used that the power situation is parallel with the railroads where Federal regulation has been found absolutely necessary. This is an illusion. It differs in several profound respects. Power has no such interstate implication as transportation. Furthermore, there has been outrageous exaggeration of the probable extent of interstate power. For economic reasons these power districts will in but few cases, reach across State lines."

The present President of the United States is in opposition to Federal regulation and control of power public utilities. His statement of facts then is now contradicted by his own Federal Power Commission.

It states what I have long been saying, that power has grown into interstate business of vast proportions and requires the strict regulation and control of the Federal President Government. It says:

Contradicted "Analysis of information furnished by ninety-one holding companies shows that forty-eight major projects under public utilities are subject to control by ten top companies, and these ten groups serve 12,478 communities with a population of more than 42,000,000."

Let me give you an illustration, not only to show the vast extent of operations of some of these great companies, but the unsound conditions created by the policies of the Federal non-interference which the President of the United States still so valiantly maintains.

The crash of the Insull empire has given excellent point to the truth of what I have been arguing for a long time.

The great "Insull monstrosity," made up of a group of holding and investing companies and exercising control over hundreds of operating companies, had distributed securities among hundreds of thousands of investors, and had taken their money to an amount running over one and a half billions of dollars.

The "Insull monstrosity" grew during the years of prosperity until it reached a position where it was an important factor in the lives of millions of people. The name was magic. The investing public did not realize then, as it does now, that the methods used in building up these holding companies were wholly contrary to every sound public policy.

They did not realize that there have been arbitrary write-ups of assets, inflation of vast capital accounts; they did not realize that excessive prices had been paid for property acquired. They did not realize that the expense of financing had been capitalized. They did not realize that payments of dividends had been made out of capital.

They did not realize that some subsidiaries had been milked and milked to keep alive the weaker sisters in the great chain. They did not realize that there had been borrowings and lendings, an interchange of assets, of liabilities and of capital between the component parts of the whole.

Charges "Milking" They did not realize that all these conditions necessitated terrific overcharges for service by these corporations.

The Insull failure has opened our eyes. It shows us that the development of these financial monstrosities was such as to compel ultimate ruin; that practices had been indulged in that suggest the old days of railroad wildcatting; that private manipulation had outsmarted the slow-moving power of government.

As always, the public paid and paid dearly. As always, the public is beginning to understand the need for reform after the same public has been fleeced out of millions of dollars.

"The Public for the American people. I believe that that "new deal" can be applied very definitely to the relationship between the electric utilities on the one side and the consumer and the investor on the other.

True regulation is for the equal benefit of the consumer and the investor, and the only man who will suffer from true regulation is the speculator or the unscrupulous promoter who levies tribute equally from the man who buys the service and from the man who invests his savings in this great industry.

I seek to protect both the consumer and the investor. To that end I propose and advocate now, as I have proposed and advocated heretofore, the
following remedies on the part of the government for the regulation and control of public utilities engaged in the power business and companies and corporations relating thereto:

1. Full publicity as to all capital issues of stocks, bonds and other securities, liabilities and indebtedness, and capital investment, and frequent information as to gross and net earnings.

Roosevelt Program 2. Publicity on stock ownership of stocks and bonds and other securities, including the stock and other interest of all officers and directors.

3. Publicity with respect to all inter-company contracts and services and interchange of power.

4. Regulation and control of holding companies by Federal power commission and the same publicity with regard to such holding companies as provided for the operating companies.

5. Cooperation of the Federal power commission with public utilities commissions of the several States, obtaining information and data pertaining to the regulation and control of such public utilities.

6. Regulation and control of the issue of stocks and bonds and other securities on the principle of prudent investment only.

7. Abolishing by law the reproduction cost theory for rate making and establishing in place of it the actual money, prudent-investment principle as the basis for rate making.

8. Legislation making it a crime to publish or circulate false or deceptive matter relating to public utilities.

I NOW come to the other great problem of the relationship of the government to the development through government itself of power resources and power manufacture.

Private Control I do not hold with those who favored government operation or government ownership of all utilities, I state to you categorically that as a broad general rule the development of utilities should remain, with certain exceptions, a function for private initiative and private capital. But the exceptions are of vital importance, local, State and national, and I believe that the overwhelming majority of the people of this country agree with me.

Again we must go back to first principles: a utility is in most cases a monopoly, and it is by no means possible in every case for government to insure at all times from mere inspection, supervision and regulation that the public should get a fair deal—in other words, to insure adequate service and reasonable rates.

I THEREFORE lay down the following principle: That where a community, a city or county or a district is not satisfied with the service rendered or the rates charged by the private utility, it has the undeniable right as one of its functions of government, one of its functions of home rule, to set up, after a fair referendum has been taken, its own governmentally-owned and operated service. That right has been recognized in most of the States of the Union. Its general recognition by every State will hasten the day of better service and lower rates.

It is perfectly clear to me and to every thinking citizen that no community which is sure that it is now being served well and at reasonable rates by a private utility company will seek to build or operate its own plant.

But on the other hand, the very fact that a community can, by vote of the electorate, create a yardstick of its own, will, in most cases, guarantee good service and low rates to its population. I might call the right of the people to own and operate their own utility a "birch rod in the cupboard, to be taken out and used only when the child gets beyond the point where mere scolding does any good."

That is the principle that applies to communities. I would apply the same principles to the Federal and State Governments.

State-owned or Federal-owned power sites can and should properly be developed by government itself. When so developed, private capital should be given the first opportunity to transmit and distribute the power on the basis of the best service and the lowest rates to give a reasonable profit only.

The right of the Federal Government and State Governments to go further and to transmit and distribute where reasonable and good service is refused by private capital gives to government, viz., the people, that same very essential "birch rod" in the cupboard.

This nation, through its Federal Government, has sovereignty over vast water power resources in many parts of the United States. A very few of these are in process of development. A few more are in the stage of blueprints and many others have not even been surveyed.
We have undertaken the development of the Boulder Dam on the Colorado River. The power will be sold by the United States Government at a cost that will return the government investment with 4 per cent interest in fifty years. States and municipalities were given a prior right to contract the power so generated.

Long before that we undertook the development at Muscle Shoals. We have spent millions on this project. The 1930 session of Congress passed the bill introduced by Senator Norris for public operation of Muscle Shoals. President Hoover vetoed the Norris bill and subsequently appointed another “commission” favorable to the power interests, which recommended leasing this great public project to private companies.

ALL that President Hoover offers on this vital subject as set forth in his acceptance speech is contained in the sentence, “I have opposed the government undertaking the operation of the power business and I shall continue in this opposition.”

Cites Mr. Hoover’s Opposition

In contrast, let me repeat the position which I took in my first inaugural address as Governor of New York, January 1, 1929, and which I have maintained ever since. I said then and I say now:

“The water power of the State should belong to all the people. The title to this power must rest forever in the people. No commission—not the Legislature itself—has any right to give, for any consideration whatever, a single potential kilowatt in vital perpetuity to any person or corporation whatever. It is the duty of our representative bodies to see that this power is transferred into usable electrical energy and distributed at the lowest possible cost. It is our power, and no inordinate profits must be allowed to those who act as the people’s agent in bringing this power to their homes and workshops.”

WE have, as all of you in this section of the country know, the vast possibilities of power development on the Columbia River. The next great hydroelectric development to be undertaken by the Federal Government must be that on the Columbia River.

This vast water power can be of inestimable value to this whole section of the country. It means cheap manufacturing production, economy and comfort on the farm and in the household. Your problem with regard to this great power is similar to our problem in the State of New York with regard to the power development of the St. Lawrence River.

Here you have the clear picture of four great government power developments in the United States, the St. Lawrence River in the Northeast, Muscle Shoals in the Southeast, the Boulder Dam project in the Southwest, and, finally, but by no means the least of them, the Columbia River in the Northwest. Each one of these will be forever a national yardstick to prevent extortion against the public and to encourage the wider use of that servant of the people—electricity.

THE power issue, where vigorously handled in the interest of the people, means abundant and cheaper current for American industry, reduced rates and increased use in millions of urban and rural homes, and preservation of our water power resources in coordination with flood control, reclamation and irrigation.

The American people have a vital stake in the proper handling of this issue. On the one hand we have the record of the present Republican Administration. It proposes to continue, as in the past, to allow the interstate promoters and manipulators of public utilities to play fast and loose with the American public without adequate regulation or control.

Although the President in his acceptance speech recommends the Federal regulation of interstate power, he has in the past, and as Secretary of Commerce in the Harding and Coolidge Cabinets, opposed Federal regulation of interstate holding and transmission companies.

HE has been silent on the non-enforcement of the Federal water power act. He has been evasive on valuation method and high rates and is apparently satisfied with the present type of State regulation.

President Silent

Since 1928 my distinguished opponent has done nothing to enforce the regulatory sections of the Federal water power act. He has done nothing to block the financial operations incident to the great post-war power development, as planned by its promoters.

The history of the Federal Power Commission prior to the creation of a full-time commission under the Couzens bill, after a congressional investigation, the character of the appointments made when this commission took office, the Muscle Shoals veto, and the closing of the White House doors to the public interest in the St. Lawrence
project, all demonstrate that the Republican policy is dominated by private rather than public interest.

In 1925 Secretary Hoover said that while there was a considerable amount of speculation going on, especially in the stocks of holding companies, he wished to make it clear that with an intelligent State regulation neither watered capital nor speculation could affect the rates paid by consumers and that there was no need for Federal control.

While President Hoover now urges Federal control, no administration bill has been introduced in Congress in the past four years.

My distinguished opponent is against giving the Federal Government in any case the right to operate their own power business.

I favor giving the people this right where and when it is essential to protect them against inefficient service or exorbitant charges.

Promises to Protect Public

As an important part of this policy, the natural hydroelectric power resources belonging to the people of the United States or the several States shall remain forever in their possession.

To the people of this country I have but one answer on this subject. Judge me by the enemies I have made. Judge me by the selfish purposes of these utility leaders who have talked of radicalism while they were selling watered stock to the people and using our schools to deceive the coming generation.

My policy is as radical as American liberty, as radical as the Constitution of the United States.

Never shall the Federal Government part with its sovereignty and control over its power resources while I am President of the United States.
