FREMONT, NEBRASKA

(Rear Platform)

(The President was presented by Dan Stephens. Audience was about 15,000.)

THE PRESIDENT: My friends, I am very glad to be introduced by my old friend, Dan Stephens, and I am glad to come to the birthplace of my Secretary of War, George Dern, and to come here in company with the Governor of your State, an old friend of mine, with Senator Burke and with former Governors Weaver and Bryan. And, my friends, I am only sorry that another old friend of mine cannot be here today. I refer to a man who probably in this country would be regarded as one of the half dozen greatest Americans -- Senator George Norris.

Yes, it is good to get into Nebraska again. It is almost exactly three years ago that I visited farms in this State (and) at that time I saw farmers threshing thirty-cent wheat and shelling twenty-cent corn. Much has happened during the three years that followed. (Then) at that time the prices of farm products were falling lower and even lower as markets vanished and surpluses accumulated; farm buildings and farm equipment were deteriorating month by month; soil fertility was being sapped as farmers struggled to raise enough bushels to meet their debts and their taxes. Country schools were closing and,
This is a transcript made by the White House stenographer from his shorthand notes taken at the time the speech was made. Underlining indicates words extemporaneously added to the previously prepared reading copy text. Words in parentheses are words that were omitted when the speech was delivered, though they appear in the previously prepared reading copy text.
most disheartening of all, thousands of farmers were losing their homes by foreclosure. (This) that was true not only in this part of the great West, but it was true also in practically every State of the Union -- north, south, east and west.

(The) that man-made depression -- because it was that -- was, as we know, followed in many parts of the country by the most severe drought in our recorded history.

I am taking (the) this opportunity, my friends, of stopping here in Fremont to deliver to you a message of thanks. Through you I deliver that same message of thanks to the farmers and farm families throughout the Nation.

We all know the heroic story of the pioneers. We know the hardships and the troubles that they suffered. If ever we need a national demonstration that the pioneering spirit that originally settled this country still lives, unshaken and undiminished, the farmers of America have proved it in the years (through which we) that have just passed. I well realize the suffering and the desolation of those years. I know the faith and hope, the patience and courage you have shown. For this I applaud you; for this I extend the thanks of the Nation to the farmers of the Nation.

Three years ago I did not promise the millenium for agriculture. But I did promise that I should attempt to meet (that) an intolerable situation -- to battle that situation in every way that human effort and human ingenuity (made possible)
could devise. I said that I should do my best, and that if my efforts proved unsuccessful, I should tell the country frankly and try something else. But I am glad to say that so far as we have gone today that has not been necessary (that was not necessary).

In those days I was not meeting a theory, I was meeting a condition. Foremost among the efforts of my Administration when we came into office in March, 1933, were practical means to improve the situation on the farms of (this) the country. I recognized in March 1933 that efforts to improve agriculture should of necessity be twofold. We should attempt first of all to lift the immediate burdens by raising farm prices and by lightening the burden of debt. Secondly, I pledged myself to long-term efforts extending beyond these immediate emergency measures to stabilize American agriculture by long-term planning.

Even before I went to the White House I put into practice a theory (which) that older and more cynical persons told me was impossible. Up to that time the farmers of America had been unable to choose by any substantial majority between three or four plans aimed at restoring farm purchasing power and farm prosperity. People in Washington told me that you could never get farmers anywhere, farmers as a whole to agree to anything. But I think differently. (Nevertheless) And so, at the famous conferences, representative of every section
of the country and of every farm organization, held in Washington in the Spring of 1933, a very large majority of the farm leaders agreed on what you and I now know as the Agricultural Adjustment Plan. (This plan has been in operation for only two years and a half.) You know its general results. You know that there have been many imperfections in it and that we still have much to learn in providing better administration for it, in amending it from time to time, and in fitting it in to world conditions, which each year are showing tremendous changes.

The plan itself, as you know, was based on the cooperative efforts of the farmers themselves and on the broad economic theory that the industrial part of the population of the Nation could not prosper and return people to work unless the agricultural part of the Nation were in a position to purchase the output of the industrial part. It was based on knowledge of the fact that for the farmers of the Nation the long, downhill road to depression began not in 1929 but way back in 1920; that from that date on through the so-called boom days of the (nineteen twenties) next 9 years the debts of the farms and farmers mounted while their assets and earnings slid down hill.

And so, coming back to you after three years, I experience the (extreme) very great pleasure of recognizing that the cooperative efforts in which the farmers themselves, the
Congress and my Administration have engaged, have borne good fruit.

The problems of the early days of the Administration were not only to raise crop values from starvation levels, but also to save farm families from actual loss of their homes and their chattels.

The burden of agricultural debt, it is true, has not been eliminated, but it has been decisively and definitely (lightened) lessened. Loans have been made through the Farm Credit Administration to nearly half a million farmers in this country since May, 1933. And those loans amount to (more than) a billion eight hundred million. Eighty-seven per cent (of this great sum) was used to refinance existing farm indebtedness. Why, the annual interest saving of farmers whose debts have been refinanced is about (one) a quarter of all of the interest previously paid. Over 850,000 (farmers) farm families are making annual savings this year in interest alone (of more than) amounting to more than $55,000,000. The interest rate which farmers have to pay on the farm mortgage debts that have been refinanced by the Farm Credit Administration, with interest, is the lowest rate in (history) the whole history of our country.

My second effort in the immediate improvement of the farmer's position was to get him not only a relatively but an absolutely better return for his products. In approaching
(this) that problem we moved on two fronts; first, to free our monetary system (of) from bondage to a sufficient extent to permit money to serve the people rather than to force people to serve money. (Applause) I deliberately chose to disregard those who said that before a balance could be produced in our economic life, almost universal bankruptcy would be necessary through the process of continuing deflation. I held then, as I (now) hold today, that the appropriate measures to take were rather to improve prices, particularly in farm commodities, to such an extent that the things the farmer had to sell would enable him to buy the things that he needed to support life and to afford him a fair degree of security.

From the summer of 1929 to the time when I took office in 1933, the prices of farm products, that is to say, the things that the farmer had to sell, had declined by 65%, while the prices of the things the farmer had to buy had fallen only 35%. Thus, the farmer of the Nation, on the average, had to use twice as many bushels of wheat, twice as many bushels of corn, twice as many tons of hay, twice as many hogs, twice as many bales of cotton, twice as much of all of his products, in order to buy the same amount of things that he needed. The closing of that gap, my friends, was an important objective of this Administration. It still is and we shall bend our efforts to hold the gains that we have made. The gap (which) that was the measure of the farmer's despair and distress,
after two and a half years of effort (in large part has been) **has at last been closed.**

Many factors, **as you know,** were involved in this readjustment. Our monetary policy was one. The drought was another. Increased demand for products caused by the economic revival was another, and the operations of (our) the Agricultural Adjustment Administration was still another.

I need not tell you of the origins and the purposes and the methods of (the Agricultural Adjustment Act) that **Triple A Act.** That is history, and, I submit, honorable history. Moreover, the farmers know how the Act has worked. They know from the contents of their own pocketbooks that their income has been increased. The record is there to prove the case — an increase of $1,000,000,000 in farm cash income in 1933 over the year 1932; **an increase of $1,900,000,000** (increase) in 1934 over 1932 and an estimated **increase of $2,400,000,000** (increase) in **this year of 1935** over 1932. (Applause) Yes, that makes a total increase of $5,300,000,000 over what the farmer's income would have been if the 1932 level had been continued. Is it surprising, in the light of this improved income, that the farm implement factories in Illinois and New York (and), the automobile factories of Michigan, (and) the steel mills of Pennsylvania, are springing into **renewed life and activity?** Is it any wonder that smoke is pouring once more from chimneys long smokeless? Is it any wonder
that workers long without regular jobs are going back to work in increasing numbers? Now, with export surpluses no longer pressing down on the farmer's welfare, and with fairer prices, farmers really have a chance for the first time in this generation to profit from improved methods. (Applause) With agriculture on the way to a condition of prosperity, it is possible now for the farmers of the (country) nation in cooperation with their Government, to look to the longer future.

Three years ago, in the desperate struggle to keep want from the threshold, farmers, no matter how much they might have wished to adopt cropping practices that would conserve and build the fertility of their soil, were compelled to raise more bushels of wheat and corn (or), more pounds of cotton (and) or tobacco than their land could properly sustain through the years. But with this compelling necessity now passed, they can put scientific crop rotation systems into effect and save their soil fertility. That, my friends, is of equal interest in Pennsylvania and in (Kansas) Nebraska (and), in Maine and in Georgia. The dust storms that a few months ago drifted from the western plains to the Atlantic Ocean were a warning to the whole Nation of what will happen if we waste our heritage of soil fertility, the ultimate source of our wealth and of life itself. (Applause)

I have not the time to talk with you in detail about
what the Government is trying to do to prevent soil erosion and floods. You know much of that great work to encourage forestation, to give people the opportunity voluntarily to move off submarginal land and on to adequate land where they can make both ends meet -- in other words, to use every square mile of the United States for the purpose to which it is best adapted. That in its accomplishment is a project of a hundred years. But for the first time in the history of the Nation, we have started on that project because for the first time we have begun to understand that we must harness nature in accordance with nature's laws, instead of despoothing nature in violation of (her) nature's laws. (Applause)

Perhaps the most important gain of all is the development of the farmer's ability, through cooperation with other farmers, to direct and control the conditions of his life. Programs now in effect under the Agricultural Adjustment (Act) Administration are planned and operated by the farmers themselves through nearly 5,000 county production control associations, which are manned by more than 100,000 committeemen and which number among their members more than 3,000,000 adjustment contract signers. Those are pretty big figures, but it is a grand sign of farm solidarity, and remember the Government's part in this program is merely to supply the unifying element that the farmers themselves, in their past efforts, found so essential to success. That, it seems to me, is the true function of a Government under our Constitution -- to promote the general welfare, not by interfering
unduly with individual liberties, but by bringing to the aid of the individual those powers of Government which are essential to assure the continuance of the inalienable rights which the Constitution is intended to guarantee. (Applause) Yes, this is (It is) democracy in the good old American sense of the word.

The Government's policy toward agriculture has been evolving ever since the (time) days of the first President of the United States, George Washington. I know it will continue to evolve and I hope no one thinks that the present machinery is perfect and cannot be improved. What counts is not so much the methods of the moment as the pathways that are marked out down the years. I like to think of the Agricultural Adjustment Act, not merely as a temporary means of rescue for a great industry, but as the expression of an enduring principle carved in stone by a Nation that has come to maturity -- a Nation (which has) that has forever left behind the old irresponsible ways of its youth, a Nation facing the realities of today and prudently taking thought for the morrow. I like to think that never again will this Nation let its agriculture fall back into decay, and that instead the farmers of America will always be able to guard the principles of liberty and democracy for which their farmer ancestors fought. I like to think that agricultural adjustment is an expression, in concrete form, of the human rights those
farmer patriots sought to win when they stood at the bridge at Concord, when they proclaimed the Declaration of Independence, and when they perpetuated these ideals by the adoption of the Constitution of the United States. (Applause) Methods and machinery may change, but principles go on, and I have faith that, no matter what attempts may be made to tear it down, the principle of farm equality expressed by agricultural adjustment will not die. (Applause)

You who live in this section of Nebraska occupy what is very nearly the geographical center of the United States -- as much land west of you as lies east of you, as much land north of you as lies south of you. It is, therefore, fitting that at this place I should again pay tribute through you to the great farming population of the United States and those dependent on them for the splendid courage through long years of adversity which you have shown -- true to the pioneering spirit that would not quit, that made the best of well-nigh hopeless conditions -- that had (enough) faith enough in yourselves (and) enough faith in your country to keep your balance, to keep your perspective, to keep your good nature, and your continuing hope. (Applause) (Today) And so, my friends, I am today very happy, happy that you are marching along with heads still held high. Your hope has materialized, at least in part. Your faith has been justified. Your courage has been rewarded. (Applause)
I am glad to be in Nebraska again. It is almost exactly three years ago that I visited farms in this State and saw farmers threshing thirty cent wheat and shelling twenty cent corn. Much has happened during the three years that followed. Then, the prices of farm products were falling lower and even lower as markets were being sapped as farmers struggled to raise enough bushels to meet their debts and taxes. Country schools were closing and, most disheartening of all, thousands of farmers were losing their homes by foreclosure. This was true not only in the Great West, but in practically every State of the Union - north, east, south and west.

The man made depression was, as we know, followed in many parts of the country by the most severe drought in our recorded history.

I am taking the opportunity of stopping here in Fremont to deliver to you a message of thanks. Through you I deliver that same message to farmers and farm families throughout the Nation.

We all know the heroic story of the pioneers. We know the hardships and the troubles they suffered. If ever we need demonstration that the pioneering spirit that originally settled this country still lives, unshaken and undiminished, the farmers of America have proved it in the years through which we have just passed. I well realize the suffering and the desolation. I know the faith and hope, the patience and courage you have shown. For this I applaud you; for this I extend the thanks of the Nation to the farmers of the Nation.

Three years ago I did not promise the millennium for agriculture. But I did promise that I should attempt to meet that intolerable situation in every way that human effort and ingenuity made possible. I said that I should do my best, and that if my efforts proved unsuccessful, I should tell the country frankly and try something else. But that was not necessary.

I was not meeting a theory, I was meeting a condition. Foremost among the efforts of my Administration when we came into office were practical means to improve the situation on the farms of this country. I recognized in March 1933 that efforts to improve agriculture should of necessity be two fold. We should attempt, first, to lift the immediate burdens by raising farm prices and by lightening the burden of debt. Second, I pledged myself to long-term efforts extending beyond these immediate emergency measures to stabilize American agriculture by long-term planning.
Even before I went to the White House I put into practice a theory which older and more cynical persons told me was impossible. Up to that time the farmers of America had been unable to choose by any substantial majority between three or four plans aimed at restoring farm purchasing power and farm prosperity. People in Washington told me that you could never get farmers as a whole to agree to anything. Nevertheless, at the famous conferences, representative of every section of the country and of every farm organization, held in Washington in the spring of 1933, a very large majority of the farm leaders agreed on what you and I now know as the Agricultural Adjustment Plan. This plan has been in operation for only two years and a half. You know its general results. You know that there have been many improvements in it and that we still have much to learn in providing better administration for it, in amending it from time to time, and in fitting it in to world conditions, which each year show tremendous changes.

The plan itself was, as you know, based on the cooperative efforts of the farmers themselves and on the broad economic theory that the industrial part of the population of the Nation could not prosper and return people to work unless the agricultural part of the Nation were in a position to purchase the output of the industrial part. It was based on the knowledge of the fact that for the farmers of the Nation the long, downhill road to depression began not in 1929 but in 1920; that from that date on through the following years the buying power of the farmer and farmers mounted while their assets and earnings slid down hill.

Coming back to you after three years, I experience the extreme pleasure of recognizing that the cooperative efforts in which the farmers themselves, the Congress and my Administration have engaged, have borne good fruit.

The problem of the early days of the Administration was not only to raise crop values from starvation levels, but also to save farm families from actual loss of their homes and their chattels.

The burden of agricultural debt, it is true, has not been eliminated, but it has been constructively and definitely lightened. Loans have been made through the Farm Credit Administration to nearly half a million farmers since May 1933. These loans amount to more than $1,300,000,000. Eighty-seven per cent of this great sum was used to refinance existing farm indebtedness. The annual interest saving of farmers whose debts have been refinanced is about one-quarter of the interest previously paid. Over 350,000 farmers are making savings this year on interest alone of more than $55,000,000. The interest rate which farmers have to pay on the farm mortgage debts refinanced by the Farm Credit Administration is the lowest rate in history.

My second effort in the immediate improvement of the farmer's position was to get him not only a relatively but an absolutely better return for his products. In approaching this problem we moved on two fronts; first, to free our monetary system of bondage to a sufficient extent to permit money to serve the people rather than to force people to serve money. I deliberately chose to disregard those who said that before a balance could be produced in our economic life, almost universal bankruptcy would be necessary through deflation. I held, as I now hold, that the appropriate measures to take were rather to improve prices, particularly in farm commodities, to such an extent that the things the farmer had to sell would enable him to buy the things that he needed to support himself and to afford him a fair degree of security. From the summer of 1929 to the time when I took office in 1933, the prices of farm products, that is, the things that the farmer had to sell, had declined by 62%, while the prices of the things the farmer had to buy had fallen 36%. Thus, the
farmer, on the average, had to use twice as many bushels of wheat, twice as many bushels of corn, twice as many hogs, twice as many bales of cotton, twice as much of all of his products, in order to buy the same amount of things that he needed. The closing of that gap was an important objective of this Administration, and we shall bend our efforts to hold the gains that we have made. The gap which was the measure of the farmer's despair and distress, after two and a half years of effort, in large part has been closed.

Many factors were involved in this readjustment. Our monetary policy was one. The drought was another. Increased demand for products caused by the economic revival was another, and the operations of our Agricultural Adjustment Administration was still another.

I need not tell you of the origins and the purposes and the methods of the Agricultural Adjustment Act. That is history, and, I submit, honorable history. Moreover, the farmers know how the Act has worked. They know from the contents of their own pocket-books that their income has been increased. The record is there to prove the case — an increase of $1,000,000,000 in farm cash income in 1936 over 1932; $3,400,000,000 increase in 1935 over 1934; and an estimated $2,400,000,000 increase in 1936 over 1935. That makes a total increase of $5,800,000,000 over what the farmer's income would have been if the 1933 level had been continued. Is it surprising, in the light of this improved income, that the farm implement factories in Illinois and New York and the automobile factories of Michigan, and the steel mills of Pennsylvania, are springing into activity? Is it any wonder that smoke is pouring once more from chimneys long smokeless? Is it any wonder that workers long without regular jobs are going back to work? Now, with export surpluses no longer pressing down on the farmer's welfare, and with fairer prices, farmers really have a chance for the first time in this generation to profit from improved methods. With agriculture on the way to a condition of prosperity, it is possible now for the Farmers of the country, in cooperation with their Government, to look to the longer future.

Three years ago, in the desperate struggle to keep want from the threshold, farmers, no matter how much they might have wished to adopt cropping practices that would conserve and build the fertility of their soil, were compelled to raise more bushels of wheat and corn or pounds of cotton and tobacco than their land could properly sustain through the years. But with this compelling necessity now passed, they can put scientific crop rotation systems into effect and save their soil fertility. That, my friends, is of equal interest in Pennsylvania and in Kansas and in Maine and in Georgia. The dust storms that a few months ago drifted from the western plains to the Atlantic Ocean were a warning to the whole Nation of what will happen if we waste our heritage of soil fertility, the ultimate source of our wealth and of life itself.

CONFIDENTIAL: Release upon delivery, expected upon arrival at Fremont, Nebraska, about 12:45 P.M., Central Standard Time. Please safeguard against premature release.

Stephen T. Early
Assistant Secretary to the President.

I am glad to be in Nebraska again. It is almost exactly three years ago that I visited farms in this State and saw farmers threshing thirty cent wheat and shelling twenty cent corn. Much has happened during the three years that followed. So the prices of farm products were falling lower and even lower as markets vanished and surpluses accumulated; farm buildings and equipment were deteriorating month by month, till fertility was being sapped as farmers struggled to raise enough bushels to meet their debts and taxes. Country schools were closing and, most disheartening of all, thousands of farmers were losing their homes by foreclosure. This was true not only in this part of the great West, but in practically every State of the Union—north, east, south and west.

The man-made depression was, as we know, followed in many parts of the country by the most severe drought in our recorded history.

I am taking the opportunity of stopping here in Fremont to deliver to you a message of thanks. Through you I deliver that same message to farmers and farm families throughout the Nation.

We all know the heroic story of the pioneers. We know the hardships and the troubles they suffered. If ever we need demonstration that the pioneering spirit that originally settled this country still lives, unshaken and undiminished, the farmers of America have proved it in the years through which we have just passed. I well realize the suffering and the desolation. I know the faith and the hope, the patience and courage you have shown. For this I applaud you; for this I extend the thanks of the Nation to the farmers of the Nation.

Three years ago I did not promise the millennium for agriculture. But I did promise that I should attempt to meet intolerable situation in every way that human effort and ingenuity could produce. I said that I should do my best, and that if my efforts proved unsuccessful, I should tell the country frankly and try something else. But that was not necessary.

I was not meeting a theory, I was meeting a condition. Foremost among the efforts of my Administration when we came into office were practical means to improve the situation on the farms of this country. Recognized in March 1933, that efforts to improve agriculture should of necessity be two fold. We should attempt, first, to lift the immediate burdens by raising farm prices and by lightening the burden of debt. Second, I pledged myself to long-term efforts extending beyond these immediate emergency measures to stabilize American agriculture by long-term planning.
Even before I went to the White House I put into practice a theory that was more or less cynical. I said it was impossible to build any program for the farmers of America if any substantial majority between three or four plans aimed at restoring farm purchasing power and farm prosperity.

People in Washington told me that you could never get farmers as a whole to agree to anything. Nevertheless, at the famous conferences, representative of every section of the country and of every farm organization, held in Washington in the spring of 1933, a very large majority of the farm leaders agreed that you and I now know as the Agricultural Adjustment Plan. This plan has been in operation for only two years and a half. You know its general results. You know that there have been many imperfections in it and that we still have much to learn in providing better administration for it, in amending it from time to time, and in fitting it in to world conditions, which each year show tremendous changes.

The plan itself, as you know, is based on the cooperative efforts of the farmers themselves and on the broad economic theory that the industrial part of the population of the Nation could not prosper and return people to work unless the agricultural part of the Nation were in a position to purchase the output of the industrial part. It was based on knowledge of the fact that for the farmers of the Nation the long decline downhill began in 1929 but--that in the so-called boom days of 1920-21 the country incurred the debts of the farms and farmers mounted while their assets and earnings slid down hill.

Coming back to you after three years, I experience the extreme pleasure of recognizing that the cooperative efforts in which the farmers themselves, the Congress and my Administration have engaged, have borne good fruit.

The problem of the early days of the Administration was not only to raise crop values from starvation levels, but also to save farm families from actual loss of their homes and chattels.

The burden of agricultural debt, it is true, has not been eliminated, but it has been decisively and definitely reduced. Loans have been made through the Farm Credit Administration to nearly half a million farmers since May, 1933. These loans amount to more than $1,800,000,000. Eighty-seven per cent of this great sum was used to refinance existing farm indebtedness. The annual interest saving of farmers whose debts have been refinanced is about one-quarter of the interest previously paid. Over 850,000 farmers are making savings this year in interest alone on annual interest rate which farmers have to pay on the farm mortgage debt refinanced by the Farm Credit Administration is the lowest rate in history.

My second effort in the immediate improvement of the farmer's position was to get him not only a relatively but an absolutely better return for his products. In approaching this problem I moved on two fronts: First, to free our monetary system and make a sufficient extent to permit money to serve the people rather than to force people to serve money. I deliberately chose to disregard those who said that before a balance could be produced in our economic life, almost universal bankruptcy would be necessary through deflation. I held, as I still hold, that the appropriate measures to take were rather to improve prices, particularly in farm commodities, to such an extent that the things the farmer had to sell would enable him to buy the things that he needed to support life and to afford him a fair degree of security. From the summer of 1929 to the time when I took office in 1933, the prices of farm products, that is, the things that the farmer had to sell, had declined by 60%, while the prices of the things the farmer had to buy had fallen 35%. Thus, the
Three years ago, in the desperate struggle they must keep their corn and cotton, and build the fertility of their land. They must have crops that would conserve and build the fertility of their land. They must have crops that would conserve and build the fertility of their land.

The threshold farmers, the tenant farmers, the sharecroppers, the black farmers, the Indian farmers, the Mexican farmers, the sharecroppers, and the tenant farmers. All of these farmers need the knowledge and skill to improve their land, and they must have the opportunity to do so. They must have the opportunity to do so.

I have not the time to talk in detail about what the government is trying to do. To prevent soil erosion, to give people the opportunity to move off subsistence farms, to make both ends meet. It is a matter of the utmost importance that the patience of the nation be not tried and our resources not wasted.

The need is there to be met. The need is there to be met. The need is there to be met.

And we have a duty to the farmers of the nation, as well as to the land itself, to see that the land is used for the benefit of all. The land is our heritage.

The need is there to be met. The need is there to be met. The need is there to be met.
Perhaps the most important gain of all is the development of the farmer's ability, through cooperation with other farmers, to direct and control the conditions of his life. Programs now in effect under the Agricultural Adjustment Act are planned and operated by the farmers themselves through nearly 5,000 county production control associations, which are named by more than 100,000 committee men and which number among their members more than 3,000,000 adjustment contract signers. The Government's part in this program is merely to supply the unifying element that the farmers themselves, in their past efforts, have been essential to success. That, it seems to me, is the true function of Government under our Constitution -- to promote the general welfare, not by interfering unduly with individual rights, but by bringing to the aid of the individual those powers of Government which are essential to assure the continuance of the inalienable rights which the Constitution is intended to guarantee. 

The Government's policy toward agriculture has been evolving ever since the time of George Washington. I know it will continue to evolve. I hope no one thinks that the present machinery is perfect and cannot be improved. What counts is not so much the methods of the moment as the pathways that are marked out down the years. I like to think of the Agricultural Adjustment Act, not merely as a temporary means of rescue for a great industry, but as the expression of an enduring principle carved in stone by a Nation's蠕嘴 to security -- a Nation which forever left behind the old irresponsible ways of its youth, a Nation facing the realities of today and prudently taking thought for the morrow. I like to think that never again will this Nation let its agriculture fall back into decay, that instead the farmers of America will always be able to guard the principles of liberty and democracy for which their farmer ancestors fought. I like to think that agricultural adjustment is an essential prerequisite of the American form of the Government that the farmers fought to win when they stood at the bridge at Concord, when they proclaimed the Declaration of Independence, and when they perpetuated these ideals by the adoption of the Constitution.

Methods and machinery change, but principles go on, and I have faith that, no matter what attempts may be made to tear it down, the principles of farm equality expressed by agricultural adjustment will not die.

You who live in this section of Nebraska occupy what is very nearly the geographical center of the United States -- as much land west of you as lies east of you, as much land north of you as lies south of you. It is, therefore, fitting that at this place I should again pay tribute to you to the great farming population of the United States and those dependent on them for the splendid courage through long years of adversity which you have shown -- to the pioneering spirit that would not quit, that made the best of all-nigh hopeless conditions -- that had faith in yourselves and in your country to keep your balance, your perspective, your good nature, and your continuing hope. If you are marching along with heads still held high. Your hope has materialized, it looms in a part Your faith has been justified. Your courage has been rewarded.
