FELLOW SERVANTS OF THE AMERICAS:

All of the men and women of this Pan American Scientific Congress have come here tonight with heavy hearts. During the past few years we have seen event follow event, each and every one of them a shock to our hopes for the peaceful development of modern civilization.

In some human affairs the mind of man grows accustomed to unusual actions if they are oft repeated. That is not so in the world happenings of today — and I am proud that it is not so. I am glad that we are shocked and angered by the tragic news from Belgium and the Netherlands.

The overwhelmingly greater part of the population of the world abhors conquest and war and bloodshed — prays that the hand of neighbor shall not be lifted against neighbor. The whole world has seen attack follow threat on many occasions and in many places during
these later years, we have come to the reluctant conclusion that a continuance of these processes of arms presents a definite challenge to the continuation of the type of civilization to which all of us in the three Americas have been accustomed for generations.

I use this Pan American Scientific Congress as one of many similar illustrations. It is no accident that this meeting takes place in the New World. In fact, this Hemisphere is now almost the only part of the earth in which such a gathering can take place. Elsewhere war or politics has compelled teachers and scholars to leave their great calling and to become agents of destruction.

We, and most people in the world, believe in a civilization of construction and not of destruction. We, and most people in the world, believe that men and women have an inherent right to hew out the patterns of their own individual lives, just so long as they as individuals do not harm their fellow beings. We call this by many synonymous terms -- individual liberty,
civil liberty, democracy.

Until now we have been permitted by common consent to search for truth, to teach the truth as we see it — and by learning a little here and a little there, and teaching a little here and a little there to allow the normal processes of truth to grow for the well-being of our fellow men. In our search and in our teaching we are a part of a great adventure — an exciting adventure — which gives to us a larger satisfaction even than did the adventure of settling the Americas give to our Founding Fathers. We feel that we are building human progress by conquering disease and poverty and discomfort, and by improving science and culture, removing one by one the cruelties, the crudities and the barbarities of less civilized eras.

In contrast, in other parts of the world, teachers and scholars are not permitted to search for truth lest the truth when made known might not suit the designs of their masters. Too often they are not allowed to teach
the truth as they see it, for truth might make men free. They become objects of suspicion if they speak truthfully, if they show an interest in new truth, for their very tongues and minds are supposed to be mobilized for other ends.

This has not happened in the New World. God willing, it shall not happen in the New World.

At the Pan American Conference at Buenos Aires, and again at Lima, we discussed a dim and unpleasant possibility. We feared that other Continents might become so involved in wars brought on by the school of destruction that the Americas might have to become the guardian of Western culture, the protector of Christian civilization.

In those days it was merely a fear. Today the fear has become a fact.
The inheritance which we had hoped to share with every nation in the world is, for the moment, left largely in our keeping: and it is our compelling duty to guard and enrich that legacy, to preserve it for a world which must be reborn from the ashes of the present disaster.

Today we know that until recent weeks too many citizens of the American Republics believed themselves wholly safe - physically, and mentally and morally -- from the impact of the attacks on civilization which are in progress elsewhere. Perhaps this mistaken idea was based on the false teaching of geography -- the thought that a distance of several thousand miles from a war-torn Europe gave to us some form of mystic immunity which could never be violated.

Yet, speaking in terms of time-tables, in terms of the moving of men and guns and planes and bombs, every...
historic efforts to dominate the world in by-gone centuries.

From the point of view of conquests, it is a shorter distance
from the center of Europe to Santiago de Chile than it was
for the chariots of Alexander from Macedonia to Persia. In
modern terms it is a shorter distance from Europe to San
Francisco than it was for the ships and legions of Caesar from Rome to Spain or Britain. Today it is four or five
hours from the Continent of Africa to the Continent of South
America, where it was four or five weeks for the armies of
Napoleon to move from Paris to Rome or Paris to Poland.

You who are scientists may be told that you are
responsible because of the processes of invention for the
annihilation of time and space, but I assure you that it is not the scientists of the world who are responsible,

because the objectives which you have had have looked
toward closer and more peaceful relations between all
nations through the spirit of cooperation and the inter-
change of knowledge. What has come about has been caused
solely by those who would use, and are using, your inventions of peace in a wholly different cause -- those who seek to dominate hundreds of millions of people in vast areas -- those who, if successful in that aim, will, we must now admit, enlarge their wild dream to encompass every human being and every mile of the earth's surface.

The great achievements of science and even of art can be used to destroy as well as create; they are only instruments by which men try to do the things they most want to do. If death is desired, science can do that. If a full life is sought, science can do that also.

Happily for us that question is solved -- for in the New World we live for each other and in the service of a Christian faith.

--- OUR SOLUTION ---

Is this solution of the application of science permanent or safe if it is solved for us alone? That it seems to me is the most immediate issue that the Americas face. Can we continue our peaceful construction if all the other Continents embrace modernism or enter a wholly...
different principle of life?

Surely it is time for our Republics to spread that problem before us in the cold light of day, to analyze it, to ask questions, to demand answers, to use every knowledge, every science we possess, to apply common sense, and especially to act with unanimity and singleness of purpose.

I am a pacifist. You, my fellow citizens of twenty-one American Republics, are pacifists.

But I believe that by overwhelming majorities you and I, in the long run and if it be necessary, will act together to protect and defend by every means our science, our culture, our freedom and our civilization.

RADIO ADDRESS OF THE PRESIDENT
In connection with the Eighth American Scientific Congress
Delivered from Constitution Hall, Washington, D. C.
May 10, 1940, 9.30 P. M., E. S. T.

MY FELLOW SERVANTS OF THE AMERICAS:

All (of) the men and women of this Pan American
Scientific Congress have come here tonight, I think, with
heavy hearts. During the past few years (we) you and I have
seen event follow event, each and every one of them a shock,
a shock to our hopes for the peaceful development of modern
civilization as we know it. And this very day, the tenth of
May 1940, this very day three more independent nations have
been cruelly invaded by force of arms.

In some kinds of human affairs the mind of man
(grows) becomes accustomed to unusual actions if (they are
oft) those actions are often repeated. But that is not so
in the world happenings of today -- and I am proud that it
is not so. I am glad that we Americans of the three Americas
are shocked (and), that we are angered by the tragic news
that has come to us from Belgium and The Netherlands and
Luxemburg. (Applause)

The overwhelmingly greater part of the population
of the world abhors conquest and war and bloodshed -- it
prays that the hand of neighbor shall not be lifted against
neighbor. The whole world has seen attack follow threat on
(so) very many occasions and in (so) very many places during
these later years. We have come, therefore, to the reluctant

ALL (at) the new and money of this plan are

pertinently concerned have come to be expected. [I may add I have (we) know (we) have seen every fellow source ever owned one of those papers (books) with an advertisement of the President's GEOGRAPHY OF THE UNITED NATIONS. We know (WE) have seen more important ventures have

been similarly or even of more of our own.

In some cases of money matters the story of how

(they) become necessary to meeting necessity it (there)

get (all) that's available the effort has been

in the military expenditure to get -- until we acquire the

rarity came to me from Russia, the interpretation and

improvement (advances)

the oratorio movement that goes back of the operation.

It -- the world above, countries one and until 1914

have since the bond of nationalism that lost in the

world. The whole world has been affected by the American

(our) own way of the very fine piece of

those Israel people we have come into face.
conclusion that a continuance of these processes of arms presents a definite challenge to the (continuation) continuance of the type of civilization to which all of us (in the three Americas) have been accustomed for so many generations.

I use this American -- Pan American Scientific Congress as (one of) an illustration, and I could use many similar illustrations. It is no accident that this meeting takes place in the New World. In fact, this Hemisphere is now almost the only part of the earth in which such a gathering can take place. Elsewhere war or politics in its worst sense has compelled teachers and scholars to leave their great callings and to become the agents of destruction.

We, and most of the people in the world, believe still in a civilization of construction and not of destruction. (Applause) We, and most of the people in the world, still believe that men and women have an inherent right to hew out the patterns of their own individual lives, just so long as they as individuals do not harm their fellow beings.

We call this thought, this ideal, by many terms which are synonymous (terms) -- we call it individual liberty, we call it civil liberty and, I think, best of all, we call it democracy.

Until now, up till these days, we permit ourselves by common consent to search for truth, to teach the truth as we see it -- and by learning a little here and a little there, and by teaching a little here and a little there to allow the
normal processes of truth to keep growing, keep growing for
the well-being of our fellow men. In our search and in our
 teachings we are a part of a great adventure -- an exciting
adventure -- an adventure (which) that gives to us a larger
satisfaction, I think even a larger satisfaction than (did)
our forefathers had when they were in the midst of the adven-
ture of settling the Americas (give to our Founding Fathers)
from the Old World. We feel that we are building human pro-
gress by conquering disease and poverty and discomfort, and
by improving science and culture, removing one by one the
many (cruelty) cruelties, (the cruelty) and crudities and
(the barbarism) barbarities of less civilized eras.

In contrast to that, to that rather simple, rather
fine picture of our ideals -- in contrast, in other parts of
the world, teachers and scholars are not permitted to search
for truth lest the truth when made known might not suit the
designs of their masters. Too often they are not allowed to
 teach the truth as they see it, (for) because truth might
make men free. (Applause) Yes, they become objects of
suspicion if they speak openly, if they show an interest in
new truth, for their (very) tongues and minds are supposed
to be mobilized for other ends.

This has not happened in the New World. God Willing,
it shall not happen in the New World. (Applause)

At the Pan American Conference at Buenos Aires,
and again at Lima, we discussed a dim and unpleasant possi-
bility. We feared that other Continents might become so involved in war(s), wars brought on by the school of destruction -- not construction -- that the Americas might have to become the guardians of Western culture, the protector of Christian civilization.

And in those days, not so long ago, it was merely a fear. Today the fear has become a fact.

The inheritance which we had hoped to share with every nation (in) of the world is, for the moment, left largely in our keeping: and it is our compelling duty to guard and enrich that legacy, to preserve it for a world which must be born, reborn from the ashes of the present disaster.

Today we know, we admit, that until recent weeks too many citizens of (the) our American Republics believed themselves wholly safe -- physically, and economically and socially safe -- safe from the impact of the attacks on civilization which are in progress elsewhere. And perhaps this mistaken idea was based on (the) a false teaching of geography -- the thought that a distance of several thousand miles from a war-torn Europe to a peaceful America, that that distance in itself gave to us some form of mystic immunity (which) that could never be violated.

And yet, in speaking in terms of -- what shall I say? -- time-tables, speaking in terms of the moving of men and guns and planes and bombs, every single acre -- every hectare -- (of) in all the Americas from the Arctic to the
Antarctic, every one of them, is closer to the home(s) of modern conquerors, closer to (and) the scenes of the attacks in Europe than was ever the case in (historic) those episodes of history that we read about, the efforts to dominate the whole world by conquest in (by-gone) centuries gone by.

From the point of view of conquest(s), it is a shorter distance from the center of Europe to Santiago de Chile than it was for the chariots of Alexander the Great to roll from Macedonia to Persia. In modern terms it is a shorter distance from Europe to San Francisco, California than it was for the ships and the legions of Julius Caesar to move from Rome to Spain or Rome to Britain. And today it is four or five hours of travel from the Continent of Africa to the Continent of (South) America, where it was four or five weeks for the armies of Napoleon to (move) march from Paris to Rome or Paris to Poland.

You who are scientists may (be) have been told that you are in part responsible for the debacle of today because of the processes of invention, invention for the annihilation of time and of space, but I assure you that it is not the scientists of the world who are responsible, because the objectives which you have (had have) looked to, all of those objectives have been headed toward closer and more peaceful relations between all nations through the spirit of cooperation and the interchange of knowledge. What has come about has been caused solely by those who would use, and are using,
your inventions (of peace in a wholly), the progress that you have made along lines of peace but using them in an entirely different cause -- those people who seek to dominate hundreds of millions of people in vast continental areas -- those who, if they are successful in that aim will, we (must now admit) know down in our hearts, enlarge their wild dream to encompass every human being and every mile of the earth's surface.

The great achievements of science, yes and (even) of art, can be used in one way or another to destroy as well as to create; they are only instruments by which men try to do the things that they most want to do. If death is desired, science can do that. If a full, a rich, a useful life is sought, science can do that also. Happily for us that question (is) has been solved -- for in the New World we live for each other and in the service of a Christian faith.

Is this solution -- our solution -- is it permanent or safe if it is solved just for us alone? That (it) seems to me (is) to be the most immediate issue that the Americas face. Can we continue our peaceful construction if all the other Continents in all the world embrace by preference or by compulsion a wholly different principle of life? No, I think not.

Surely it is time for our Republics to spread that problem before us in the cold light of day, to analyze it, to ask questions, to (demand) call for answers, to use every knowledge, every science that we possess, to apply common sense,
and (especially) above all to act with unanimity and singleness of purpose. (Prolonged applause)

I am a pacifist. You, my fellow citizens of twenty-one American Republics, you are pacifists too.

But I believe that by overwhelming majorities in all the Americas you and I, in the long run and if it be necessary, you and I will act together to protect (and), to defend by every means at our command -- to protect and to defend our science, our culture, our American freedom and our civilization. (Applause)
FELLOW SERVANTS OF THE AMERICAS:

CARE MUST BE EXERCISED TO PREVENT PREMATURE PUBLICATION.

STEPHEN EARLY
Secretary to the President
ADDRESS OF THE PRESIDENT
PAN AMERICAN SCIENTIFIC CONGRESS
MAY 10, 1940

FELLOW SERVANTS OF THE AMERICAS:

All of the men and women of this Pan American Scientific Congress have come here tonight with heavy hearts. During the past few years we have seen event follow event, each and every one of them a shock to our hopes for the peaceful development of modern civilisation. This very day three more independent nations have been cruelly invaded by force of arms.

In some human affairs the mind of man grows accustomed to unusual actions if they are oft repeated. That is not so in the world happenings of today — and I am proud that it is not so. I am glad we are shocked and angered by the tragic news from Belgium, The Netherlands and Luxenbourg.

The overwhelmingly greater part of the population of the world abhors conquest and war and bloodshed — prays that the hand of neighbor shall not be lifted against neighbor. The whole world has seen attack follow threat on so many occasions and in so many places during
these later years when we have come to the reluctant conclusion that a continuance of these processes of arms has reached the point of presenting a definite challenge to the continuation of the type of civilization to which all of us in the three Americas have been accustomed.

I use this Pan American Scientific Congress as one of many similar illustrations. It is no accident that this meeting takes place in the New World. In fact, this Hemisphere is now almost the only part of the earth in which such a gathering can take place. Elsewhere war or politics has compelled teachers and scholars to leave their great calling and to become agents of destruction.

We, and most people in the world, believe in a civilization of construction and not of destruction. We, and most people in the world, believe that men and women have an inherent right to hew out the patterns of their own individual lives, just so long as they as individuals do not harm their fellow beings. We call this by many synonymous terms — individual liberty,
civil liberty, democracy.

Until now we have been permitted by common consent to search for truth, to teach the truth as we see it — and by learning a little here and a little there, and teaching a little here and a little there to allow the normal processes of truth to grow. For the well-being of our fellow men. In our search and in our teaching we are a part of a great adventure — an exciting adventure — which gives to us a larger satisfaction even than did the adventure of settling the Americas give to our Founding Fathers. We feel that we are building human progress by conquering disease and poverty and discomfort, and by improving science and culture, removing one by one the cruelty, the crudity and the barbarism of less civilised eras.

In contrast, in other parts of the world, teachers and scholars are not permitted to search for truth lest the truth when made known might not suit the designs of their masters. Too often they are not allowed to teach
the truth as they see it, for truth might make men free. They become objects of suspicion if they speak freely, if they show an interest in new truth, for their very tongues and minds are supposed to be mobilized for other ends.

This has not happened in the New World. God willing, it shall not happen in the New World.

At the Pan American Conference at Buenos Aires, and again at Lima, we discussed a dim and unpleasant possibility. We feared that other Continents might become so involved in wars brought on by the school of destruction that the Americas might have to become the guardian of Western culture, the protector of Christian civilization.

In those days it was merely a fear. Today the fear has become a fact.
The inheritance which we had hoped to share with every nation in the world is, for the moment, left largely in our keeping; and it is our compelling duty to guard and enrich that legacy, to preserve it for a world which must be reborn from the ashes of the present disaster.

Today we must admit that until recent weeks too many citizens of the American Republics believed themselves wholly safe — physically, and economically — from the impact of the attacks on civilisation which are in progress elsewhere. Perhaps this mistaken idea was based on the false teaching of geography — the thought that a distance of several thousand miles from a war-torn Europe gave to us some form of mystic immunity which could never be violated.

Yet, speaking in terms of time-tables, in terms of the moving of men and guns and planes and bombs, every acre of the Americas from the Arctic to the Antarctic is closer to the homes of modern conquerors and the scenes of attacks in Europe than was the case in
historic efforts to dominate the world in by-gone centuries. From the point of view of conquests, it is a shorter distance from the center of Europe to Santiago de Chile than it was for the chariots of Alexander, from Macedonia to Persia. In modern terms it is a shorter distance from Europe to San Francisco than it was for the ships and legions of Caesar to move from Rome to Spain or Britain. Today it is four or five hours from the Continent of Africa to the Continent of South America, where it was four or five weeks for the armies of Napoleon to move from Paris to Rome or Paris to Poland.

You who are scientists may be told that you are responsible because of the processes of invention for the annihilation of time and space, but I assure you that it is not the scientists of the world who are responsible, because the objectives which you have had have looked toward closer and more peaceful relations between all nations through the spirit of cooperation and the interchange of knowledge. What has come about has been caused
solely by those who would use, and are using, your inventions of peace in a wholly different cause — those who seek to dominate hundreds of millions of people in vast local areas — those people who, if successful in that aim, will, we must now admit, enlarge their current dream to encompass every human being and every mile of the earth's surface.

The great achievements of science and even of art can be used to destroy as well as create; they are only instruments by which men try to do the things they most want to do. If death is desired, science can do that. If a full life is sought, science can do that also. Happily for us that question is solved — for in the New World we live for each other and in the service of a Christian faith.

This is our solution — the solution of the application of science.

permanent or safe if it is solved for us alone? That it seems to me is the most immediate danger that the Americas face. Can we continue our peaceful construction if all the other Continents come to life under a wholly
different principle of life?

Surely it is time for our Republics to spread that problem before us in the cold light of day, to analyze it, to ask questions, to demand answers, to use every knowledge, every science we possess, to apply common sense, and especially to act with unanimity and singleness of purpose.

I am a pacifist. You, my fellow citizens of twenty-one American Republics, are pacifists.

But I believe that by overwhelming majorities you and I, in the long run and if it be necessary, will act together to protect and defend by every means we can our science, our culture, our freedom and our civilization.

................
FELLOW SERVANTS OF THE AMERICAS:

All of the men and women of this Pan American
Scientific Congress have come here tonight with heavy
hearts. During the past few years we have seen event
follow event, each and every one of them a shock to
our hopes for the peaceful development of modern
civilisation. This very day three more independent nations
have been cruelly invaded by force of arms.

In some human affairs the mind of man grows
accustomed to unusual actions if they are oft repeated.

That is not so in the world happenings of today — and

I am proud that it is not so. I am glad that we are shocked
and angered by the tragic news from Belgium and The Netherlands
and Luxembourg.

The overwhelmingly greater part of the population
of the world abhors conquest and war and bloodshed —

prays that the hand of neighbor shall not be lifted
against neighbor. The whole world has seen attack follow
very very
threat on so many occasions and in so many places during
therefore these later years when we have come to the reluctant conclusion that a continuance of these processes of arms is presenting a definite challenge to the continuation of the type of civilization to which all of us in the three Americas have been accustomed for generations.

I use this Pan American Scientific Congress as one of many similar illustrations. It is no accident that this meeting takes place in the New World. In fact, this Hemisphere is now almost the only part of the earth in which such a gathering can take place. Elsewhere, war or politics has compelled teachers and scholars to leave their great calling and to become agents of destruction.

We, and most people in the world, believe in a civilization of construction and not of destruction. We, and most people in the world, believe that men and women have an inherent right to hew out the patterns of their own individual lives, just so long as they as individuals do not harm their fellow beings. We call this by many synonymous terms -- individual liberty,
civil liberty, democracy.

Until now we have been permitted by common consent to search for truth, to teach the truth as we see it — and by learning a little here and a little there, and teaching a little here and a little there to allow the normal processes of truth to grow; for the well-being of our fellow men. In our search and in our teaching we are a part of a great adventure — an exciting adventure — which gives to us a larger satisfaction even than did the adventure of settling the Americas give to our Founding Fathers. We feel that we are building human progress by conquering disease and poverty and discomfort, and by improving science and culture, removing one by one the cruelty, the crudity and the barbarism of less civilised ages.

In contrast, in other parts of the world, teachers and scholars are not permitted to search for truth lest the truth when made known might not suit the designs of their masters. Too often they are not allowed to teach
the truth as they see it, for truth might make men free. They become objects of suspicion if they speak openly, if they show an interest in new truth, for their very tongues and minds are supposed to be mobilised for other ends.

This has not happened in the New World. God willing, it shall not happen in the New World.

At the Pan American Conference at Buenos Aires, and again at Lima, we discussed a dim and unpleasant possibility. We feared that other Continents might become so involved in wars brought on by the school of destruction that the Americans might have to become the guardian of Western culture, the protector of Christian civilisation.

In those days it was merely a fear. Today the fear has become a fact.
The inheritance which we had hoped to share with every nation in the world is, for the moment, left largely in our keeping: and it is our compelling duty to guard and enrich that legacy, to preserve it for a world which must be reborn from the ashes of the present disaster.

Today we admit that until recent weeks too many citizens of the American Republics believed themselves economically, socially -- safe wholly safe -- physically, and morally and morally unharmed from the impact of the attacks on civilization which are in progress elsewhere. Perhaps this mistaken idea was based on the false teaching of geography -- the thought that a distance of several thousand miles from a war-torn Europe gave to us some form of mystic immunity which could never be violated.

Yet speaking in terms of time-tables, in terms of the moving of men and guns and planes and bombs, every -- every hectare -- acre of the Americas from the Arctic to the Antarctic is closer to the homes of modern conquerors and the scenes of attacks in Europe than was the case in
historic efforts to dominate the world in by-gone centuries. From the point of view of conquests, it is a shorter distance from the center of Europe to Santiago de Chile than it was to roll for the chariots of Alexander from Macedonia to Persia. In modern terms it is a shorter distance from Europe to San Francisco than it was for the ships and legions of Caesar to move from Rome to Spain or Britain. Today it is four or five hours from the Continent of Africa to the Continent of South America, where it was four or five weeks for the armies of Napoleon to move from Paris to Rome or Paris to Poland.

You who are scientists may be told that you are responsible because of the processes of invention for the annihilation of time and space, but I assure you that it is not the scientists of the world who are responsible, because the objectives which you have had have led toward closer and more peaceful relations between all nations through the spirit of cooperation and the interchange of knowledge. What has come about has been caused
solely by those who would use, and are using, your inventions
of peace in a wholly different cause — those who seek to
continentals
of peace in a wholly different cause — those who seek to
dominate hundreds of millions of people in vast
those
pursue a dream in that aim, will, we must now
wild
admit, enlarge their
being and every mile of the earth's surface.

The great achievements of science and even of art
can be used to destroy as well as create; they are only
instruments by which men try to do the things they most
want to do. If death is desired, science can do that.
If a full life is sought, science can do that also.
Happily for us that question is solved — for in the New
World we live for each other and in the service of a
Christian faith.

this — our solution --
Is the solution of... application of... permanent or safe if it is solved for us alone? That
issue
it seems to me is the most immediate danger that the
Americans face. Can we continue our peaceful construction
embrace by preference or by compulsion
if all the other Continents a... a... a... a... a... a...
different principle of life?

Surely it is time for our Republics to spread that problem before us in the cold light of day, to analyze it, to ask questions, to demand answers, to use every knowledge, every science we possess, to apply common sense, and especially to act with unanimity and singleness of purpose.

I am a pacifist. You, my fellow citizens of twenty-one American Republics, are pacifists.

But I believe that by overwhelming majorities you and I, in the long run and if it be necessary, will act at our command — together to protect and defend by every means our science, protect & defend our culture, our freedom and our civilization.
